1. INTRODUCTION

1.1 Project Overview:

The courier and logistics industry handles a large number of shipments every day, making accurate shipment management, timely delivery, and effective communication essential for business operations. Traditional methods such as paper registers, spreadsheets, phone calls, and manual status updates can make it difficult to maintain accurate information and coordinate activities between branches, customers, and delivery agents.

The Courier Management System (CMS) is a Salesforce-based cloud application developed to provide a centralized platform for managing courier operations. The system allows organizations to maintain customer information, register shipments, assign delivery agents, monitor shipment status, manage branch information, generate invoices, and analyze operational performance.

The system uses Salesforce custom objects, relationships, validation rules, Salesforce Flows, reports, dashboards, and security features to automate important courier activities. By bringing these functions together in one platform, CMS provides better visibility of shipment information and reduces dependency on manual processes. The proposed system is designed to support courier organizations in improving operational coordination, maintaining accurate records, reducing processing errors, and providing better service to customers.

1.2 Purpose

The primary purpose of the Courier Management System (CMS) is to digitize and centralize courier-related activities using the Salesforce platform.

The system is designed to:

- Maintain customer information in a structured manner.
- Register and manage courier shipments.
- Generate unique tracking numbers for shipments.
- Assign available delivery agents to shipments.
- Monitor shipment progress through different delivery stages.
- Maintain branch and delivery-agent information.
- Record delivery updates and remarks.
- Manage shipment billing and invoice information.
- Provide reports and dashboards for management.
- Reduce manual data entry and operational errors.
- Improve communication and visibility throughout the delivery process.

By integrating these activities into a single cloud-based application, the system helps employees access relevant information quickly and enables managers to monitor courier operations more effectively.

1.3 Objectives

The major objectives of the Courier Management System are:

1. Centralized Data Management:

To maintain customer, shipment, branch, delivery-agent, delivery-update, and invoice information in one Salesforce platform.

2. Shipment Management:

To simplify the process of creating and managing courier shipments from booking until delivery.

3. Shipment Tracking:

To maintain updated shipment statuses such as Booked, In Transit, Out for Delivery, Delivered, and Cancelled.

4. Delivery Agent Management:

To maintain delivery-agent information and associate agents with appropriate shipments and branches.

5. Process Automation:

To automate repetitive operations using Salesforce Flows and validation rules.

6. Billing Management:

To maintain invoice information and payment status associated with shipments.

7. Operational Monitoring:

To provide reports and dashboards that help branch managers monitor shipment and delivery activities.

8. Data Security:

To control access to courier information using Salesforce security features such as profiles, roles, permission sets, and sharing settings.

9. Multi-Branch Support:

To provide a structured system that can be extended to multiple courier branches.

10. Improved Customer Service:

To provide accurate shipment information and reduce delays caused by manual tracking and communication.

1.4 Scope of the Project

The scope of the Courier Management System includes the digital management of major courier and delivery operations.

Customer Management:

The system stores customer details such as name, email, phone number, address, customer type, city, state, and pincode. This information can be associated with multiple shipments.

Shipment Management:

Employees can create shipment records containing tracking information, source address, destination address, parcel weight, shipping price, expected delivery date, shipment type, and current status.

Delivery Agent Management:

The system maintains delivery-agent profiles including contact information, assigned branch, employment status, and joining date. Agents can be associated with shipments for delivery processing.

Branch Management:

Branch records contain branch name, branch code, city, state, and manager information. Delivery agents can be linked to their respective branches.

Delivery Update Management:

Delivery updates record important changes in a shipment's progress. Each update can contain the shipment, status, date and time, and remarks.

Invoice Management:

Invoice records are associated with shipments and contain invoice number, amount, invoice date, and payment status.

Automation:

Salesforce Flows and validation rules are used to automate processes and prevent invalid or incomplete data from being entered into the system.

Reporting and Analytics:

Reports and dashboards provide information about shipment status, delivery performance, branch operations, revenue, and payment status.

Security:

Salesforce security mechanisms are used to control which users can access and modify specific courier-related information.

1.5 Expected Benefits

The implementation of CMS provides several benefits to a courier organization:

- Reduces dependency on paper-based records.
- Minimizes duplicate and incorrect data entry.
- Provides centralized access to shipment information.
- Makes shipment tracking easier.
- Improves delivery-agent coordination
- Supports branch-level operational management.
- Reduces manual processing time.
- Provides better visibility through dashboards.
- Helps managers identify operational trends.
- Improves customer communication and service quality.
- Provides a scalable cloud-based platform for future expansion.

1.6 Project Outcome

The expected outcome of the project is a functional Salesforce-based Courier Management System capable of managing the complete shipment lifecycle.

The system will allow users to create customer and shipment records, associate delivery agents, update shipment progress, maintain invoice information, and analyze courier operations through reports and dashboards.

The final application will demonstrate how Salesforce can be used to transform a manually managed courier operation into a centralized, automated, and data-driven system.

2. IDEATION PHASE

The ideation phase focuses on understanding the difficulties faced by customers, branch employees, delivery agents, and managers in the courier and logistics process. The main objective of this phase is to identify operational problems and develop a suitable technology-based solution.

For the Courier Management System (CMS), the ideation process was carried out by identifying user problems, understanding their expectations, generating possible solutions, and selecting the most suitable approach for implementation.

2.1 Problem Statement – Customer Problem Statement Template:

The courier business involves several users who experience different problems during shipment processing and delivery. The major problems identified during the analysis are presented below.

PS-1: Branch Manager

Which makes me feel	Which makes me feel
Which makes me feel	Which makes me feel
Which makes me feel	Which makes me feel
Which makes me feel	Which makes me feel
Which makes me feel	Which makes me feel

PS-2:
Customer

Category	Description
I am	A Courier Customer
I'm trying to	Track my parcel and know its current delivery status
But	Shipment updates may not be available immediately
Because	Tracking information is not maintained through a centralized system
Which makes me feel	Uncertain about the location and expected delivery of my parcel

PS-3: Delivery Agent

Category	Description
I am	A Delivery Agent
I'm trying to	Complete assigned deliveries on time
Which makes me feel	Confused when assignments or delivery details change

PS-4: Operations Manager

Category	Description
am	An Operations Manager
I'm trying to	Monitor overall courier performance
But	Operational information is difficult to analyze quickly
Because	Data is stored in separate records and manual reports
Which makes me feel	Difficult to identify delays and performance issues promptly

Problem Statements

PS-1 - Branch Manager

I am:
Branch Manager

I'm trying to:
Manage all shipments
efficiently & avoid delays

But:
Tracking is manual & updates
are delayed

Because:
Registers & spreadsheets are
disconnected

Which makes me feel:
Stressed & worried about errors

PS-2 - Customer

I am:
Customer

I'm trying to:
Track my parcels in real-time

But:
Status updates are delayed
& unclear

Because:
No centralized tracking portal

Which makes me feel:
Uncertain & frustrated

Problem Statements

PS-3 - Delivery Agent

I am:
Delivery Agent

I'm trying to:
Complete all deliveries on time

But:
Routes are unclear & status
updates are manual

Because:
No mobile app & no live
tracking system

Which makes me feel:
Frustrated & pressured

PS-4 - Operations Manager

I am:
Operations Manager

I'm trying to:
Monitor end-to-end courier
operations

But:
Reports are delayed & data
is scattered

Because:
Systems are disconnected
& no central dashboard

Which makes me feel:
Overwhelmed & out of control

2.2 Empathy Map Canvas

User Persona: Branch Manager

The Branch Manager is selected as the primary user persona because the manager is involved in shipment operations, delivery-agent coordination, customer-related activities, and performance monitoring.

Think & Feel:

- Wants shipments to reach customers on time.
- Is concerned about delivery delays.
- Wants accurate shipment information.
- Needs better visibility of branch activities.
- Wants to reduce manual work and errors.

Hear:

- Customer complaints about delayed deliveries.
- Delivery agents requesting assignment changes.
- Staff reporting shipment-related problems.
- Management asking for operational reports.

See:

- Shipment registers.
- Customer information.
- Delivery-agent schedules.
- Branch records.
- Manual tracking sheets.
- Different operational reports.

Say & Do:

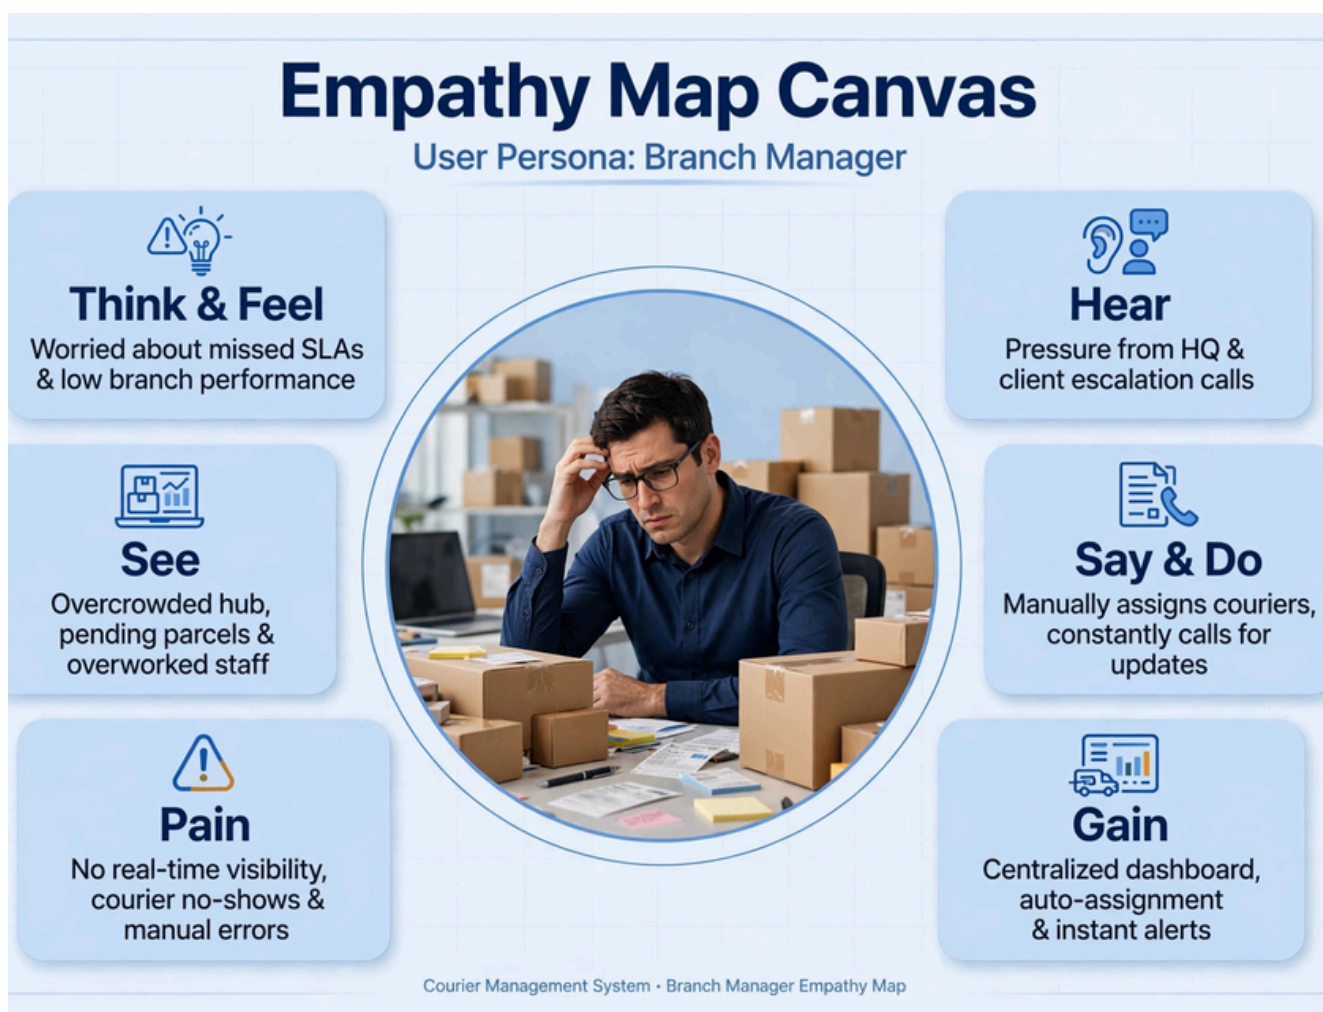

- Follows up with delivery agents.
- Checks shipment status.
- Responds to customer queries.
- Reviews branch performance.
- Assigns delivery tasks.
- Updates shipment records.

Pain Points:

- Manual shipment tracking.
- Delayed status updates.
- Difficulty coordinating agents.
- Duplicate data entry.
- Lack of centralized information.
- Time-consuming report preparation.

Gains:

- Centralized shipment information.
- Automated status updates.
- Easier agent assignment.
- Faster access to customer records.
- Real-time operational visibility.
- Automated reports and dashboards.

2.3 Brainstorming and Idea Prioritization

During the brainstorming stage, different approaches were considered for solving the identified courier management problems.

Ideas Considered

Idea	Description	Limitation
Paper Registers	Maintain shipment and customer details manually	Difficult to search and update
Spreadsheet System	Use Excel or similar spreadsheets for tracking	Limited automation and collaboration
Standalone Web Portal	Build a separate courier management website	Requires additional development and maintenance
Mobile-Based Tracking	Manage shipment activities through a mobile application	Requires dedicated application development
Salesforce-Based CMS	Use Salesforce objects, automation, security, and analytics	Requires Salesforce configuration knowledge

Idea Evaluation

The possible solutions were compared based on:

- Ease of data management
- Automation capability
- Security
- Scalability
- Reporting facilities
- Multi-user accessibility
- Cloud availability
- Integration capability
- Maintenance requirements

Selected Solution:

Salesforce-Based Courier Management System was selected as the proposed solution.

Salesforce provides several features that are suitable for the project, including:

- 1.Custom Objects** – To store courier-specific information.
- 2.Relationships** – To connect customers, shipments, agents, branches, updates, and invoices.
- 3.Validation Rules** – To prevent incorrect or incomplete data.
- 4.Salesforce Flows** – To automate courier processes.
- 5.Reports** – To analyze operational information.
- 6.Dashboards** – To display important business information visually.
- 7.Security Controls** – To restrict access to sensitive information.
- 8.Cloud Accessibility** – To provide access to the application through the Salesforce platform.

3. REQUIREMENT ANALYSIS PHASE

The requirement analysis phase identifies the functions, users, data, and technical capabilities required for the Courier Management System. The requirements are derived from the problems identified during the ideation phase.

The system is designed to support the complete courier process, starting from customer registration and shipment booking through delivery, billing, and management reporting.

3.1 Customer Journey Map

The customer journey represents the major stages through which a courier shipment passes.

Shipment Journey

Journey Stage Description

Stage	Customer/User Activity	System Activity
1. Customer Registration	Customer provides personal and contact details	Customer record is created
2. Shipment Booking	Customer requests courier service	Shipment record is generated
3. Shipment Creation	Staff enters parcel information	Tracking number is automatically generated
4. Agent Assignment	Shipment is assigned for delivery	Delivery agent is linked to shipment
5. Transit	Parcel moves toward destination	Status is updated to In Transit
6. Out for Delivery	Agent receives parcel for final delivery	Shipment status is changed
7. Delivery	Parcel reaches recipient	Delivery status is recorded
8. Billing	Shipping charge is processed	Invoice is maintained
9. Reporting	Manager reviews operations	Reports and dashboards display results
Stage	Customer/User Activity	System Activity

3.2 Solution Requirements

The requirements are divided into Functional Requirements and Non-Functional Requirements.

3.2.1 Functional Requirements

Functional requirements describe the activities that the Courier Management System must perform.

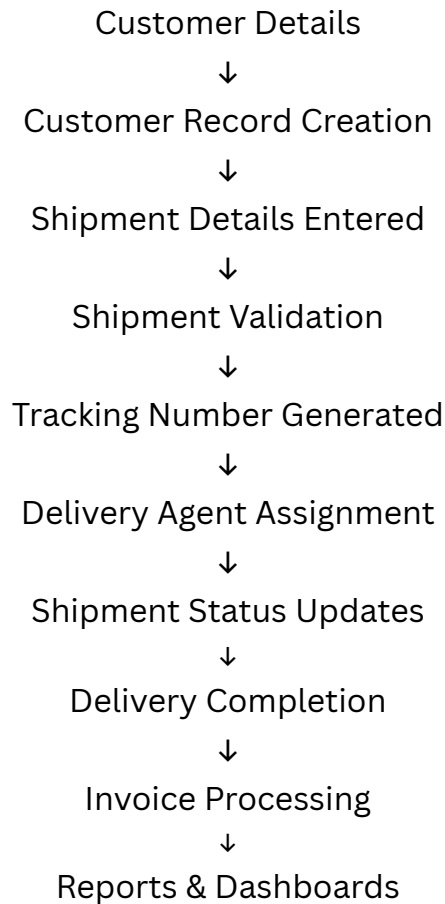

FR No.	Requirement	Description
FR-1	Customer Management	Create, view, update, and maintain customer information
FR-2	Shipment Registration	Record parcel and shipment details
FR-3	Tracking Number Generation	Generate a unique tracking number for each shipment
FR-4	Agent Assignment	Associate shipments with suitable delivery agents
FR-5	Shipment Status Management	Maintain the current stage of every shipment
FR-6	Delivery Updates	Record shipment movement and delivery remarks
FR-7	Branch Management	Maintain information about courier branches
FR-8	Invoice Management	Create and maintain shipment billing information
FR-9	Validation	Prevent incomplete or invalid shipment information
FR-10	Automation	Automate selected courier activities using Salesforce Flows

3.2.2 Non-Functional Requirements

Non-functional requirements define the quality and operational characteristics expected from the system.

NFR	Description
Usability	The application should provide a simple and understandable Salesforce Lightning interface.
Security	Courier and billing information should be accessible only to authorized users.
Scalability	The system should support additional customers, shipments, agents, and branches as the organization grows.
Data Integrity	Validation rules and relationships should help maintain accurate and consistent records.

3.3 Data Flow Diagram

Detailed Data Flow

1. Customer information is entered into the system.
2. A shipment record is created and associated with the customer.
3. The system validates required shipment information.
4. A unique tracking number identifies the shipment.
5. An available delivery agent is associated with the shipment.
6. Delivery progress is recorded through shipment status and delivery-update records.
7. After delivery, the shipment information is updated.
8. Invoice details are maintained for the shipment.
9. Operational and financial information is used in reports and dashboards.

3.3 Data Flow Diagram - Courier Management System

End-to-End Process • Automated via Salesforce CRM

Salesforce CRM Flow Automation

Automated workflows • Data sync • Notifications • Reporting

3.5 Input and Output Analysis

System Inputs

The major inputs required by CMS include:

- Customer name
- Email address
- Phone number
- Customer address
- Shipment source
- Destination address
- Parcel weight
- Shipping price
- Shipment type
- Expected delivery date
- Delivery agent
- Branch information
- Delivery status
- Delivery remarks
- Invoice amount
- Payment status

System Outputs

The system produces:

- Unique shipment tracking numbers
- Customer records
- Shipment status information
- Delivery update records
- Agent assignment information
- Invoice records
- Shipment reports
- Delivery performance reports
- Revenue reports
- Branch performance dashboards

3.6 Data Requirements

Object	Purpose
Customer_c	Stores customer information
Shipment_c	Stores parcel and shipment details
Delivery_Agent_c	Maintains delivery-agent information
Branch_c	Stores branch details
Delivery_Update_c	Records shipment progress and delivery updates
Invoice_c	Maintains billing and payment information

4. PROJECT DESIGN PHASE

The project design phase converts the requirements identified in the previous phase into a structured Salesforce solution. It defines the system architecture, major components, data relationships, and functional design of the Courier Management System.

The proposed design focuses on creating a centralized and scalable application where courier information can be stored, processed, automated, and analyzed through Salesforce.

4.1 Problem–Solution Fit

The Courier Management System addresses the major operational difficulties identified during the problem analysis

4.2 Proposed Solution

1. Customer Management

The Customer module stores personal and contact information of customers. A customer can have multiple shipments associated with their record.

2. Shipment Management

The Shipment module manages parcel information such as tracking number, source, destination, weight, price, shipment type, expected delivery date, and status.

3. Delivery Agent Management

The Delivery Agent module maintains information about delivery personnel and their associated branch.

4. Branch Management

The Branch module stores information about courier offices and helps organize delivery agents according to their respective branches.

5. Delivery Update Management

The Delivery Update module maintains the progress of shipments and records important delivery events.

6. Invoice Management

The Invoice module maintains billing information associated with courier shipments, including amount, invoice date, and payment status.

7. Automation

Salesforce Flows are used to automate selected business processes such as shipment updates, record processing, and notifications.

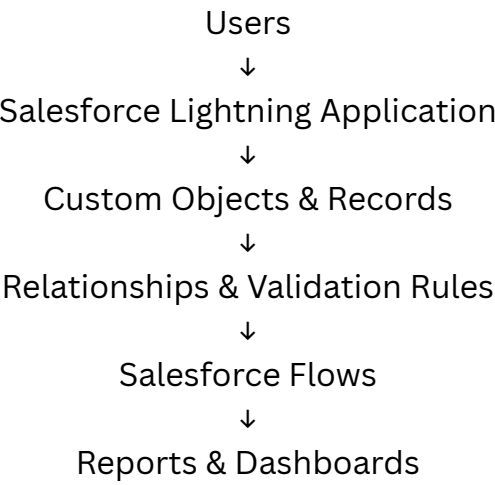

8. Reporting and Dashboards

Reports and dashboards provide managers with information about shipment volume, delivery status, branch activity, payment status, and courier performance.

4.3 Solution Architecture

The architecture of CMS consists of data objects, relationships, automation, security, and reporting components.

Architecture Flow

5. PROJECT PLANNING AND SCHEDULING

Project planning and scheduling provide a clear structure for developing the Courier Management System. This phase defines the development approach, tasks, priorities, sprint activities, team responsibilities, and expected completion of each module. The project follows an Agile-based approach so that the system can be developed incrementally and tested throughout the development process.

5.1 Project Planning

The Courier Management System is planned using the Agile Software Development Methodology. Agile divides the project into smaller development cycles called Sprints. Each sprint focuses on a specific set of features and produces a usable part of the system.

The planning process includes:

- Identifying the major modules of the Courier Management System.
- Dividing the work into smaller user stories.
- Assigning story points according to complexity.
- Giving priority to important system functions.
- Assigning tasks to individual team members.
- Completing development and testing within each sprint.
- Reviewing the completed work before starting the next sprint.
- Making improvements based on testing results.

Agile Development Cycle

Requirement Identification → Sprint Planning → Development → Testing → Review → Improvements → Next Sprint

This approach helps the team identify errors early and ensures that the system develops step by step.

5.2 Product Backlog

Sprint	User Story ID	User Story / Task	Story Points	Priority	Assigned To
Sprint 1	USN-1	Create and configure Salesforce Developer environment and Lightning application	3	High	Member 1
Sprint 2	USN-2	Create Customer, Shipment, Delivery Agent, Branch, Delivery Update and Invoice objects with relationships	5	High	Member 2
Sprint 2	USN-3	Configure fields, tabs, page layouts and navigation for the application	5	High	Member 3
Sprint 3	USN-4	Create validation rules for customer and shipment information	3	High	Member 4
Sprint 3	USN-5	Configure automation for shipment status and delivery update processes	5	High	Member 4
Sprint 4	USN-6	Configure profiles, roles, permission sets and record access	5	High	Member 2
Sprint 5	USN-7	Create reports for shipments, branches, agents and invoices	4	High	Member 3
Sprint 6	USN-8	Design an interactive dashboard for shipment monitoring	4	Medium	Member 4
Sprint 6	USN-9	Perform complete system testing and correct identified issues	3	High	Member 1

6. PROJECT DEVELOPMENT

The project development phase converts the design and requirements of the Courier Management System into a working Salesforce application. During this phase, the required objects, fields, relationships, validation rules, automation, security settings, reports, and dashboards are configured.

Salesforce provides a cloud-based development environment where courier information can be stored and managed through customized objects and Lightning components. The development process is divided into several implementation milestones to ensure that every module is configured and tested properly.

6.1 Development Environment Setup

The first step is to prepare the Salesforce development environment.

1. Development Activities
2. Create or access a Salesforce Developer environment.
3. Log in to Salesforce Lightning Experience.
4. Create the Courier Management application.
5. Configure application navigation.
6. Prepare the required custom objects.
7. Configure user access.
8. Verify that the application is working correctly.

Application Name

Courier Management System (CMS)

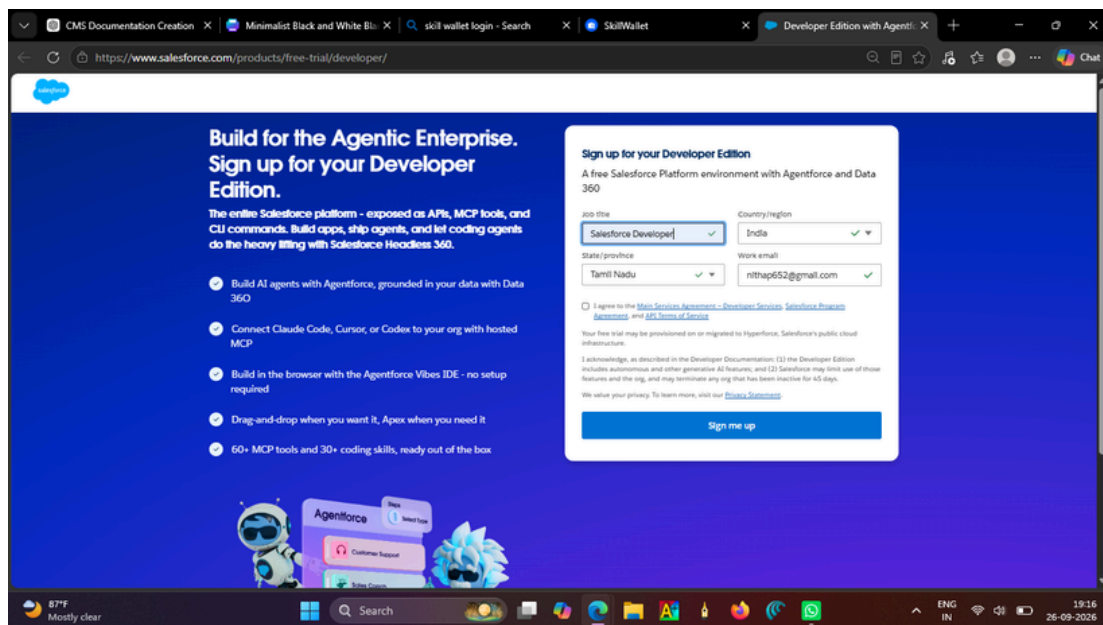

The application provides centralized access to customer, shipment, agent, branch, delivery-update, and invoice information.

Milestone 1 – Salesforce Developer Account Setup

Activity 1 – Creating Salesforce Developer Account

1. Open a web browser and visit the Salesforce Developer registration page.
2. Click Sign Up to start creating a developer account.
3. Enter your First Name and Last Name.
4. Enter a valid and accessible Email Address.
5. In Job Title, select or enter Developer.
6. In the Company field, enter your College Name.
7. Select India as the country.
8. Check the entered information for accuracy.
9. Click Sign Me Up.
10. Wait for the Salesforce verification email to arrive in the registered email account.

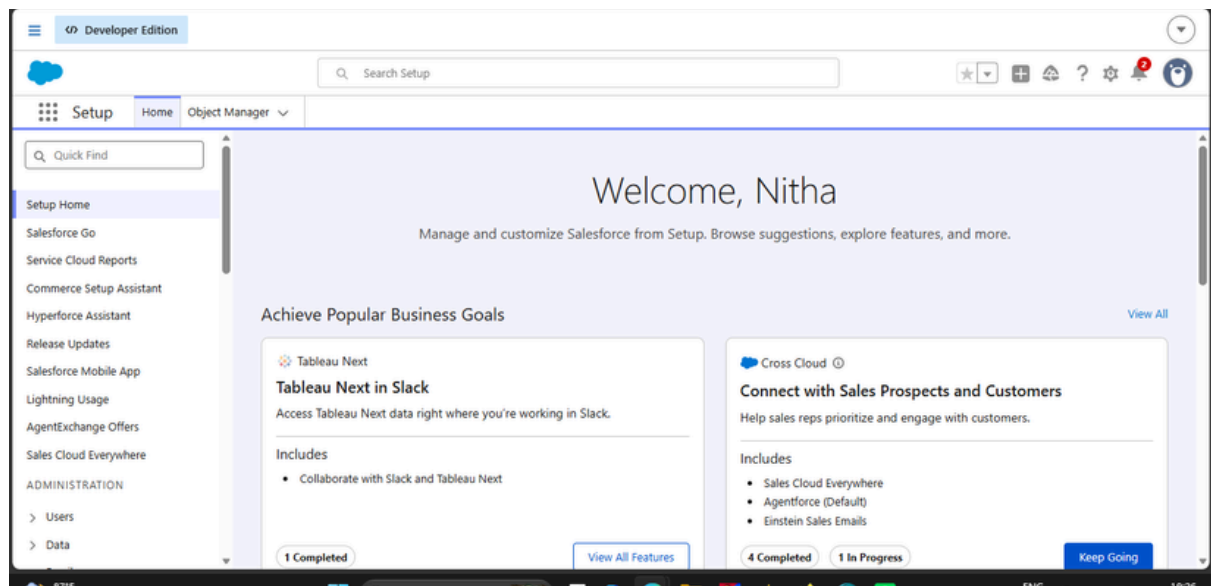

OUTPUT

Activity 2 – Activating the Salesforce Account

1. Open the email account used during Salesforce registration.
2. Find the account-verification email from Salesforce.
3. Open the email and select Verify Account.
4. The Salesforce account setup page will open.
5. Create a new password for the account.
6. Select a security question and provide the required answer.
7. Save the new password and account details.
8. Complete the verification process.
9. Sign in to Salesforce using the registered email and new password.
10. After successful login, the Salesforce Setup environment will be available for project development.

OUTPUT

Milestone 2 – Custom Object Creation

Activity 1 – Create Customer Object

Log in to Salesforce and open Setup.

From Object Manager, select Create and choose Custom Object.

Enter Customer as the Label.

Enter Customers as the Plural Label.

Select Customer Name as the Record Name.

Choose Text as the Record Name Data Type.

Enable Allow Reports.

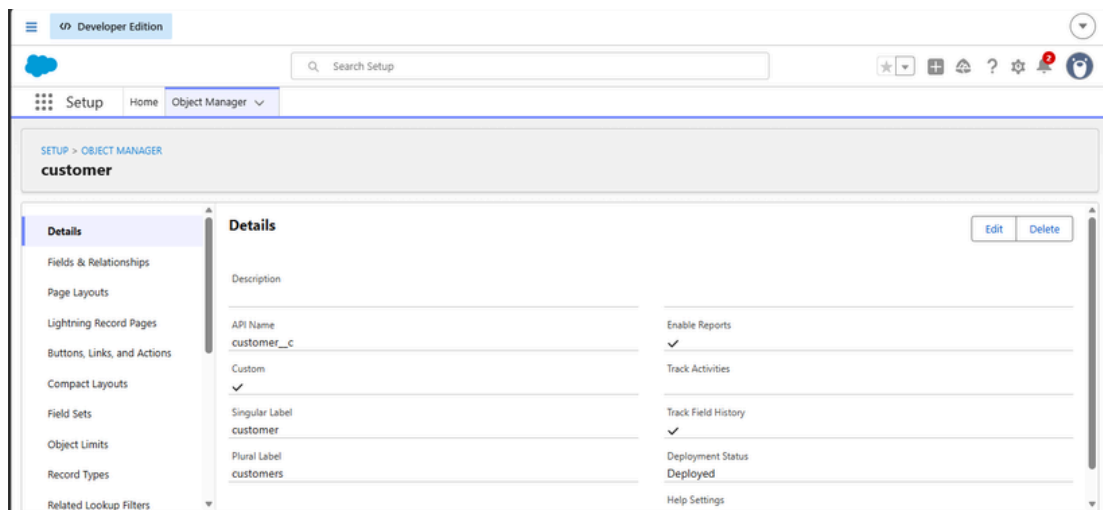

Enable Track Field History.

Enable Allow Search under Search Status.

Enable Add Notes and Attachments related list to default page layout.

Review the settings and click Save.

OUTPUT

Activity 2 – Create Shipment Object

Open Setup → Object Manager.

1. Select Create → Custom Object.
2. Enter Shipment as the Label.
3. Enter Shipments as the Plural Label.
4. Set the Record Name as Tracking Number.
5. Select Auto Number as the Record Name Data Type.
6. Enter SHP-{00000} as the Display Format.
7. Set the Starting Number as 0.
8. Turn on Allow Reports.
9. Turn on Track Field History.
10. Click Save.

Activity 3 – Create Delivery Agent Object

1. Go to Setup → Object Manager.
2. Select Create → Custom Object.
3. Set the Label to Delivery Agent.
4. Set the Plural Label to Delivery Agents.
5. Set Agent Name as the Record Name.
6. Select Text for the Record Name Data Type.
7. Enable Allow Reports.
8. Enable Track Field History.
9. Click Save.

Activity 4 – Create Branch Object

1. Open Setup → Object Manager.
2. Select Create → Custom Object.
3. Enter Branch in the Label field.
4. Enter Branches in the Plural Label field.
5. Set Branch Name as the Record Name.
6. Select Text as its Data Type.
7. Enable Allow Reports.
8. Click Save.

Activity 5 – Create Delivery Update Object

1. Navigate to Setup → Object Manager.
2. Select Create → Custom Object.
3. Enter Delivery Update as the Label.
4. Enter Delivery Updates as the Plural Label.
5. Set Update Number as the Record Name.
6. Select Auto Number as the Record Name Data Type.
7. Enter UPD-{0000} as the Display Format.
8. Set the Starting Number to 0.
9. Enable Allow Reports.
10. Enable Track Field History.
11. Click Save.

Activity 6 – Create Invoice Object

1. Go to Setup → Object Manager.
2. Select Create → Custom Object.
3. Enter Invoice as the Label.
4. Enter Invoices as the Plural Label.
5. Set Invoice Number as the Record Name.
6. Choose Auto Number as the Record Name Data Type.
7. Enter INV-{0000} as the Display Format.
8. Set the Starting Number as 0.
9. Enable Allow Reports.
10. Enable Track Field History.
11. Click Save.

OUTPUT

The screenshot displays the Salesforce Setup interface for creating custom objects. The breadcrumb trail is Setup → Object Manager → Create → Custom Object. The main heading is "Courier Management System - Custom Objects Created", with a subtitle "Summary of 4 custom objects created for streamlined courier and delivery operations".

Four custom objects are listed in a 2x2 grid:

- Shipment (Object 1 of 4)**
 - Label: Shipment
 - Plural: Shipments
 - Record Name: Tracking Number
 - Data Type: Auto Number
 - Format: SHP-{00000}
 - Starting Number: 0
 - Features: Allow Reports, Track Field History
- Delivery Agent (Object 2 of 4)**
 - Label: Delivery Agent
 - Plural: Delivery Agents
 - Record Name: Agent Name
 - Data Type: Text
 - Format: (empty)
 - Features: Allow Reports, Track Field History
- Branch (Object 3 of 4)**
 - Label: Branch
 - Plural: Branches
 - Record Name: Branch Name
 - Data Type: Text
 - Format: (empty)
 - Features: Allow Reports
- Delivery Update (Object 4 of 4)**
 - Label: Delivery Update
 - Plural: Delivery Updates
 - Record Name: Update Number
 - Data Type: Auto Number
 - Format: UPD-{0000}
 - Starting Number: 0
 - Features: Allow Reports, Track Field History

Milestone 3 – Creating Custom Tabs

Activity 1 – Create Customer Tab

1. Open Setup in Salesforce.
2. Enter Tabs in the Quick Find box.
3. Select Tabs from the available settings.
4. Under Custom Object Tabs, click New.
5. Select Customer as the object.
6. Choose a suitable Tab Style.
7. Keep the remaining options unchanged.
8. Click Next.
9. Click Next again.
10. Select Save.

Activity 2 – Create Shipment Tab

1. Navigate to Setup → Tabs.
2. Locate the Custom Object Tabs section.
3. Click New.
4. Select Shipment from the Object list.
5. Choose an appropriate icon under Tab Style.
6. Keep the default settings.
7. Click Next.
8. Click Next once more.
9. Click Save.

Activity 3 – Create Delivery Agent Tab

1. Open Setup and search for Tabs.
2. Select Tabs from the search results.
3. Click New under Custom Object Tabs.
4. Choose Delivery Agent as the object.
5. Select a suitable Tab Style.
6. Leave the other options at their default values.
7. Click Next.
8. Click Next again.
9. Click Save.

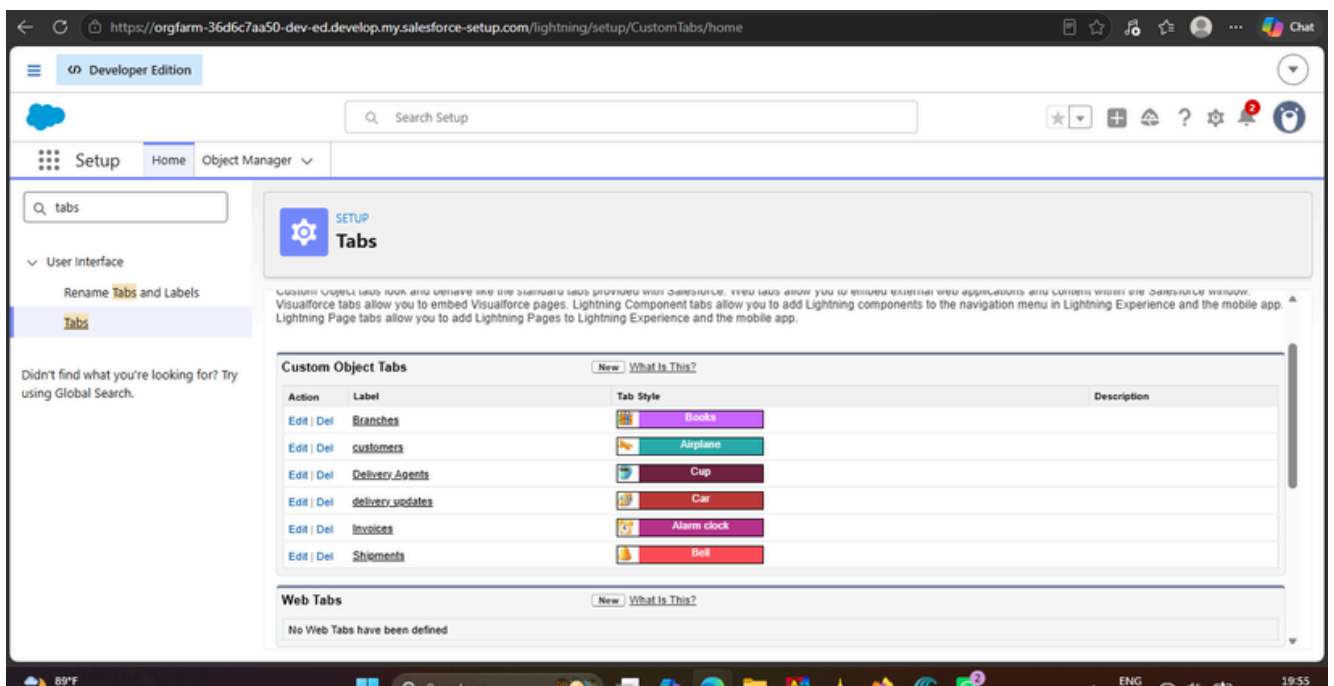

Activity 4 – Create Branch Tab

1. Go to Setup → Tabs.
2. In Custom Object Tabs, select New.
3. Choose Branch as the object.
4. Select an icon for the tab.
5. Leave the remaining settings unchanged.
6. Click Next.
7. Proceed by clicking Next.
8. Click Save.

Activity 6 – Create Invoice Tab

1. Open Setup → Tabs.
2. Find the Custom Object Tabs section.
3. Click New.
4. Select Invoice from the Object dropdown.
5. Choose a suitable tab icon.
6. Keep the default settings.
7. Click Next.
8. Click Next again.
9. Click Save.

OUTPUT

Milestone 4 – Fields & Relationships

Activity 1 – Create Fields for Customer Object

1. Create Email Field

1. Open Setup → Object Manager.
2. Select Customer__c.
3. Open Fields & Relationships and click New.
4. Select Email as the field type.
5. Click Next.
6. Enter Email as the Field Label.
7. Mark the field as Required.
8. Continue through the field-level settings.
9. Click Save.

2. Create Phone Field

1. Open Customer__c → Fields & Relationships.
2. Click New.
3. Select Phone as the field type.
4. Click Next.
5. Set the Field Label to Phone.
6. Enable Required.
7. Click Save.

3. Create Address Field

1. Go to Customer__c → Fields & Relationships.
2. Select New.
3. Choose Text Area.
4. Click Next.
5. Enter Address as the Field Label.
6. Mark the field as Required.
7. Click Save.

4. Create Customer Type Field

1. Navigate to Customer__c → Fields & Relationships.
2. Click New.
3. Select Picklist.
4. Click Next.
5. Enter Customer Type as the Field Label.
6. Add the following picklist values:
 7. Regular
 8. Business
9. Make the field Required.
10. Click Save.

5. Create City Field

1. Open Customer__c → Fields & Relationships.
2. Click New.
3. Select Text.
4. Click Next.
5. Set the Field Label to City.
6. Save the field.

6. Create State Field

1. Select New under Customer fields.
2. Choose Text.
3. Click Next.
4. Enter State as the Field Label.
5. Complete the settings.
6. Click Save.

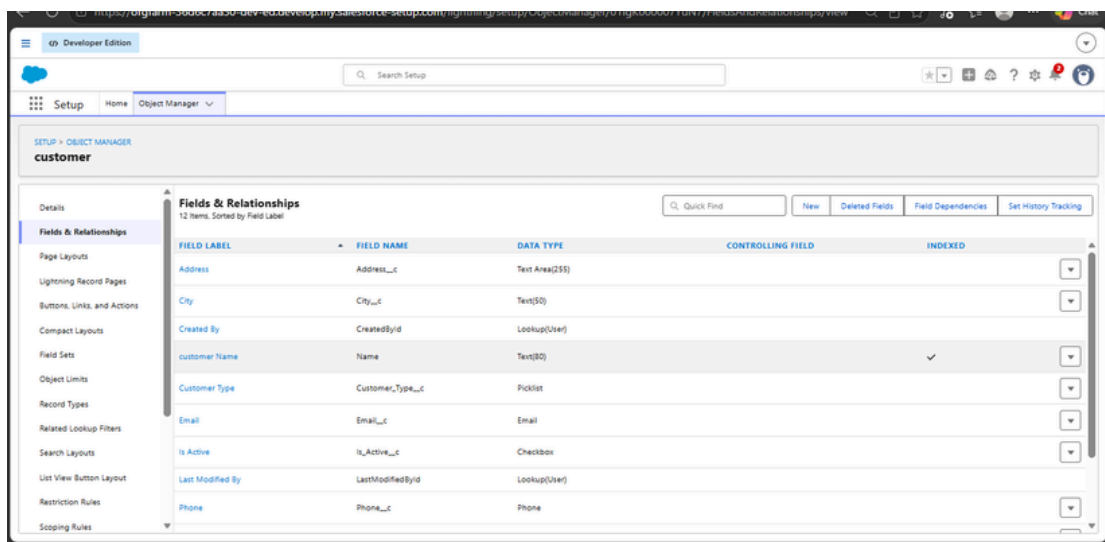

7. Create Pincode Field

1. Open Customer__c → Fields & Relationships.
2. Select New.
3. Choose Text.
4. Click Next.
5. Enter Pincode as the Field Label.
6. Click Save.

8. Create Is Active Field

1. Select New from Customer fields.
2. Choose Checkbox.
3. Click Next.
4. Enter Is Active as the Field Label.
5. Keep the default checkbox configuration.
6. Click Save.

OUTPUT

The screenshot shows the Salesforce Setup interface for the 'customer' object. The 'Fields & Relationships' section is active, displaying a list of 12 fields. The fields are sorted by Field Label. The table below represents the data shown in the screenshot.

FIELD LABEL	FIELD NAME	DATA TYPE	CONTROLLING FIELD	INDEXED
Address	Address__c	Text Area(255)		
City	City__c	Text(50)		
Created By	CreatedById	Lookup(User)		
customer Name	Name	Text(80)		✓
Customer Type	Customer_Type__c	Picklist		
Email	Email__c	Email		
Is Active	Is_Active__c	Checkbox		
Last Modified By	LastModifiedById	Lookup(User)		
Phone	Phone__c	Phone		

Activity 2 – Create Fields for Shipment Object

1. Create Source Address Field

1. Navigate to Setup → Object Manager → Shipment__c.
2. Open Fields & Relationships.
3. Click New.
4. Select Text Area.
5. Click Next.
6. Enter Source Address as the Field Label.
7. Make the field Required.
8. Click Save.
- 9.

2. Create Destination Address Field

1. Open Shipment__c → Fields & Relationships.
2. Select New.
3. Choose Text Area.
4. Enter Destination Address.
5. Enable Required.
6. Save the field.

3. Create Weight Field

1. Click New under Shipment fields.
2. Select Number.
3. Click Next.
4. Set the Field Label as Weight.
5. Mark it as Required.
6. Click Save.

4. Create Price Field

1. Select New from the Shipment fields page.
2. Choose Currency.
3. Click Next.
4. Enter Price as the Field Label.
5. Make it Required.
6. Click Save.

5. Create Status Field

1. Select New.
2. Choose Picklist.
3. Click Next.
4. Enter Status as the Field Label.
5. Add these values:
 6. Booked
 7. In Transit
 8. Out for Delivery
 9. Delivered
 10. Cancelled
11. Mark the field as Required.
12. Click Save.

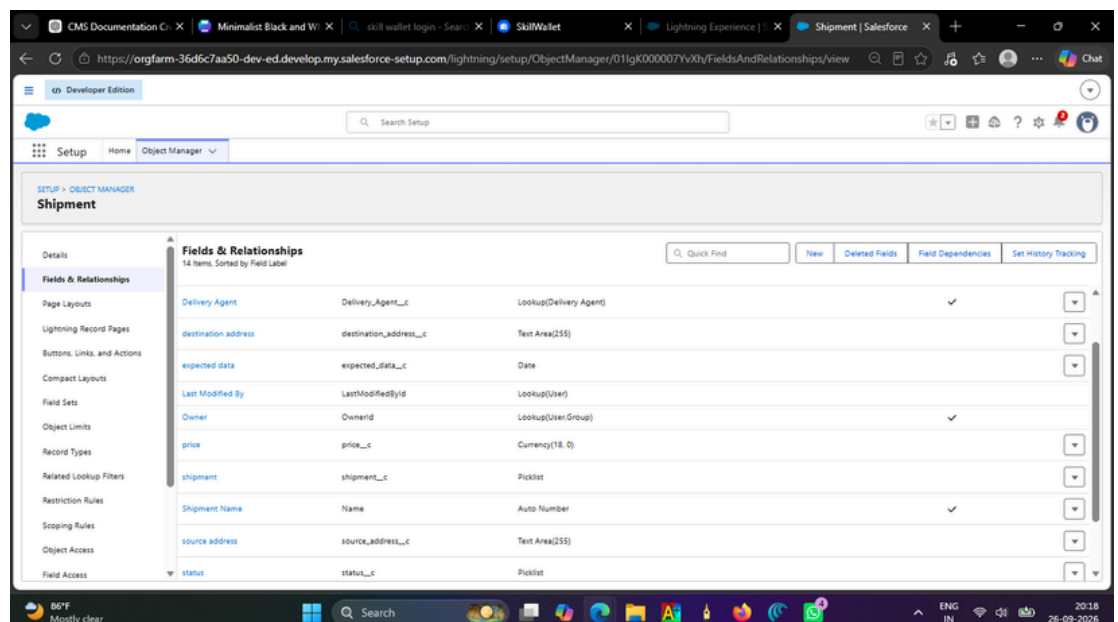

6. Create Expected Date Field

1. Click New.
2. Select Date.
3. Click Next.
4. Enter Expected Date as the Field Label.
5. Enable Required.
6. Click Save.

7. Create Shipment Type Field

1. Select New under Shipment fields.
2. Choose Picklist.
3. Click Next.
4. Enter Shipment Type as the Field Label.
5. Add:
 6. Domestic
 7. International
8. Mark it as Required.
9. Click Save.

OUTPUT

Activity 3 – Create Fields for Delivery Agent Object

1. Create Email Field

Open Setup → Object Manager → Delivery_Agent__c.

Select Fields & Relationships.

Click New.

Select Email.

Click Next.

Enter Email as the Field Label.

Enable Required.

Click Save.

2. Create Phone Field

Click New.

Select Phone.

Click Next.

Set the Field Label to Phone.

Make the field Required.

Save the field.

3. Create Status Field

Select New.

Choose Picklist.

Click Next.

Enter Status as the Field Label.

Add:

Active

Inactive

On Leave

Make the field Required.

Click Save.

4. Create Joining Date Field

Click New.

Select Date.

Click Next.

Enter Joining Date as the Field Label.

Leave the field optional.

Click Save.

Activity 4 – Create Fields for Branch Object

Create the following fields under Setup → Object Manager → Branch__c → Fields & Relationships → New.

Branch Code

1. Select Text.
2. Set Field Label to Branch Code.
3. Make it Required.
4. Save.

City

1. Select Text.
2. Enter City as the Field Label.
3. Make it Required.
4. Save.

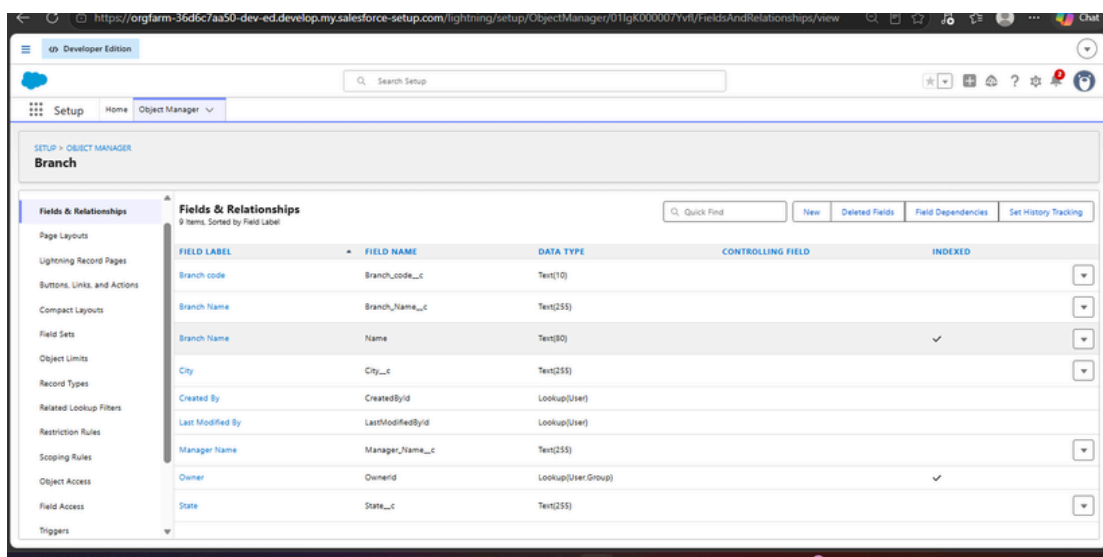

State

1. Select Text.
2. Enter State as the Field Label.
3. Make it Required.
4. Save.

Manager Name

1. Select Text.
2. Enter Manager Name as the Field Label.
3. Leave it optional.
4. Click Save.

OUTPUT

Activity 5 – Create Fields for Delivery Update Object

1. Create Shipment Relationship Field

1. Open Setup → Object Manager → Delivery_Update__c.
2. Select Fields & Relationships.
3. Click New.
4. Select Master-Detail Relationship.
5. Click Next.
6. Select Shipment__c as the related object.
7. Complete the relationship settings.
8. Click Save.

2. Create Status Field

1. Click New.
2. Select Picklist.
3. Enter Status as the Field Label.
4. Add:
 5. In Transit
 6. Out for Delivery
 7. Delivered
 8. Delayed
9. Mark it as Required.
10. Click Save.

3. Create Update Date Field

1. Select New.
2. Choose Date/Time.
3. Enter Update Date as the Field Label.
4. Mark it as Required.
5. Save the field.

4. Create Remarks Field

1. Select New.
2. Choose Text Area.
3. Set the Field Label to Remarks.
4. Leave it optional.
5. Click Save.

Activity 6 – Create Fields for Invoice Object

1. Create Shipment Lookup Field

1. Open Setup → Object Manager → Invoice__c.
2. Go to Fields & Relationships.
3. Click New.
4. Select Lookup Relationship.
5. Click Next.
6. Select Shipment__c as the related object.
7. Set the Field Label as Shipment.
8. Click Save.

2. Create Amount Field

1. Click New.
2. Select Currency.
3. Set the Field Label to Amount.
4. Make it Required.
5. Save the field.

3. Create Invoice Date Field

1. Click New.
2. Select Date.
3. Enter Invoice Date as the Field Label.
4. Make it Required.
5. Click Save.

4. Create Payment Status Field

1. Select New.
2. Choose Picklist.
3. Enter Payment Status as the Field Label.

Add:

- Paid
 - Unpaid
 - Pending
4. Make the field Required.
 5. Click Save.

Relationship Creation Steps

Activity 1 – Connect Shipment with Customer

1. Open Setup → Object Manager → Shipment__c.
2. Select Fields & Relationships.
3. Click New.
4. Choose Lookup Relationship.
5. Select Customer__c as the related object.
6. Enter Customer as the Field Label.
7. Complete the remaining settings.
8. Click Save.

Activity 2 – Connect Shipment with Delivery Agent

1. Open Shipment__c → Fields & Relationships.
2. Click New.
3. Select Lookup Relationship.
4. Choose Delivery_Agent__c.
5. Set the Field Label to Assigned Agent.
6. Click Save.

Activity 3 – Connect Delivery Agent with Branch

1. Navigate to Setup → Object Manager → Delivery_Agent__c.
2. Open Fields & Relationships.
3. Click New.
4. Select Lookup Relationship.
5. Choose Branch__c as the related object.
6. Enter Branch as the Field Label.
7. Click Save.

Activity 4 – Connect Delivery Update with Shipment

1. Open Setup → Object Manager → Delivery_Update__c.
2. Select Fields & Relationships.
3. Click New.
4. Choose Master-Detail Relationship.
5. Select Shipment__c.
6. Complete the relationship settings.
7. Click Save.

Activity 5 – Connect Invoice with Shipment

1. Open Setup → Object Manager → Invoice__c.
2. Go to Fields & Relationships.
3. Click New.
4. Select Lookup Relationship.
5. Choose Shipment__c as the related object.
6. Set the Field Label to Shipment.
7. Click Save.

Milestone 5 – Validation Rules

Activity 1 – Create Validation Rules for Customer Object

1. Validate Customer Email

1. Open Setup using the Gear icon.
2. Go to Object Manager.
3. Select Customer__c.
4. Open Validation Rules.
5. Click New.
6. Enter Email_Required as the Rule Name.
7. Enable the Active option.
8. Enter the following formula:
9. ISBLANK(Email__c)
10. Click Check Syntax.
11. Enter the error message: Email is required.
12. Set the error location to the Email field.
13. Click Save.

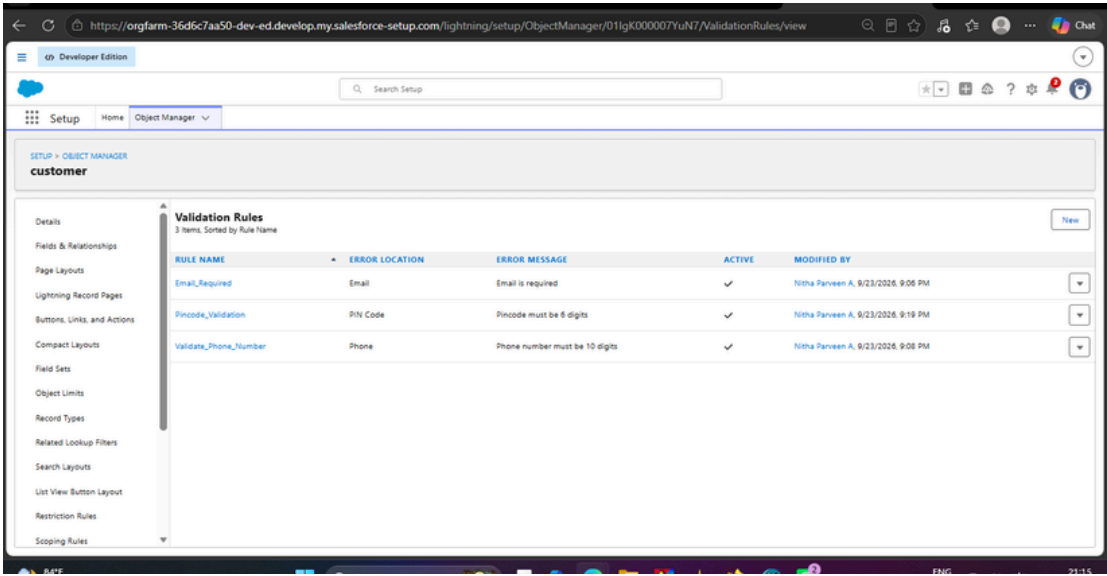

2. Validate Customer Phone Number

1. From Customer__c, open Validation Rules.
2. Click New.
3. Set the Rule Name as Validate_Phone_Number.
4. Enable the rule.
5. Enter the formula:
6. LEN(Phone__c) <> 10
7. Use Check Syntax to verify the formula.
8. Enter the error message: Phone number must be 10 digits.
9. Select Phone as the error location.
10. Click Save.

3. Validate Pincode

1. Open Customer__c → Validation Rules.
2. Click New.
3. Enter Validate_Pincode as the Rule Name.
4. Make the rule active.
5. Enter:
6. LEN(Pincode__c) <> 6
7. Check the formula syntax.
8. Enter: Pincode must be 6 digits.
9. Select the Pincode field for the error location.
10. Click Save.

OUTPUT

Activity 2 – Create Validation Rules for Shipment Object

1. Validate Shipment Weight

1. Go to Setup → Object Manager → Shipment__c.
2. Select Validation Rules.
3. Click New.
4. Enter Validate_Weight as the Rule Name.
5. Enable the rule.
6. Enter:
7. **Weight__c <= 0**
8. Click Check Syntax.
9. Enter the error message: Weight must be greater than zero.
10. Set the error location to Weight.
11. Click Save.

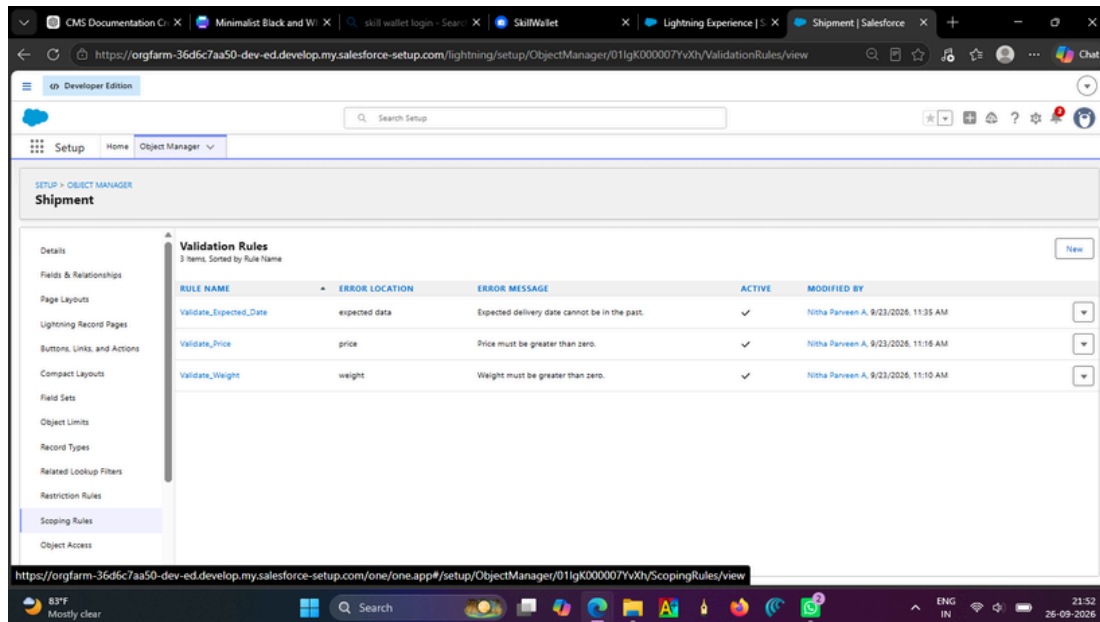

2. Validate Shipment Price

1. Open Shipment__c → Validation Rules.
2. Click New.
3. Name the rule Validate_Price.
4. Activate the rule.
5. Enter:
6. **Price__c <= 0**
7. Verify the formula using Check Syntax.
8. Enter: Price must be greater than zero.
9. Select Price as the error location.
10. Click Save.

3. Validate Expected Delivery Date

1. Select New from the Shipment Validation Rules page.
2. Enter Validate_Expected_Date as the Rule Name.
3. Add the following formula:
4. **Expected_Date__c < TODAY()**
5. Click Check Syntax.
6. Enter the message: Expected delivery date cannot be in the past.
7. Select Expected Date as the error location.
8. Save the validation rule.

OUTPUT

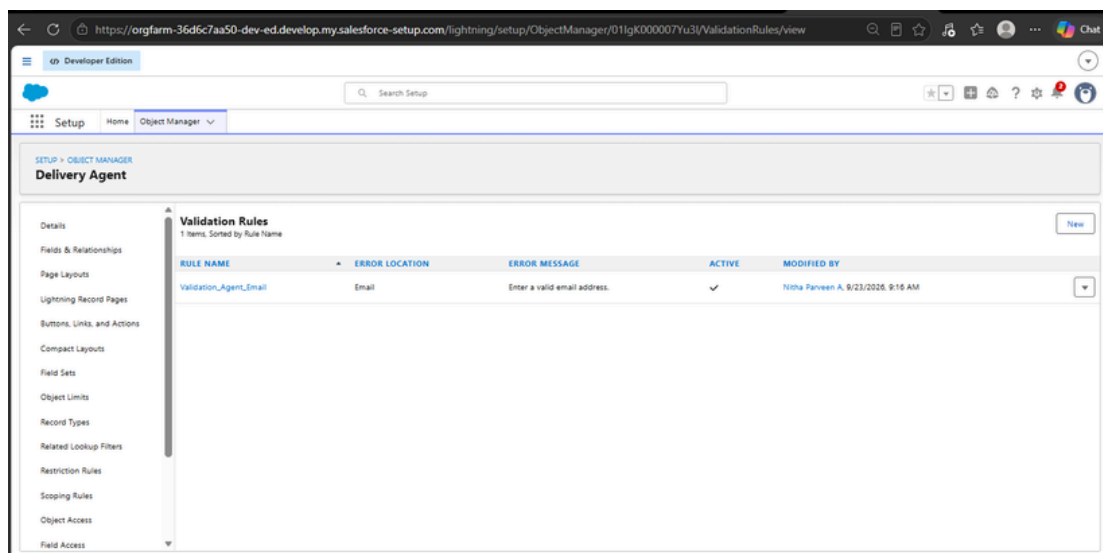

Activity 3 – Create Validation Rule for Delivery Agent

1. Validate Agent Email

1. Open Setup → Object Manager → Delivery_Agent__c.
2. Select Validation Rules.
3. Click New.
4. Enter Validate_Agent_Email as the Rule Name.
5. Activate the validation rule.
6. Enter:
 7. **NOT(CONTAINS(Email__c, "@"))**
 8. Check the formula syntax.
 9. Enter the error message: Enter a valid email address.
 10. Set the error location to Email.
 11. Click Save.

OUTPUT

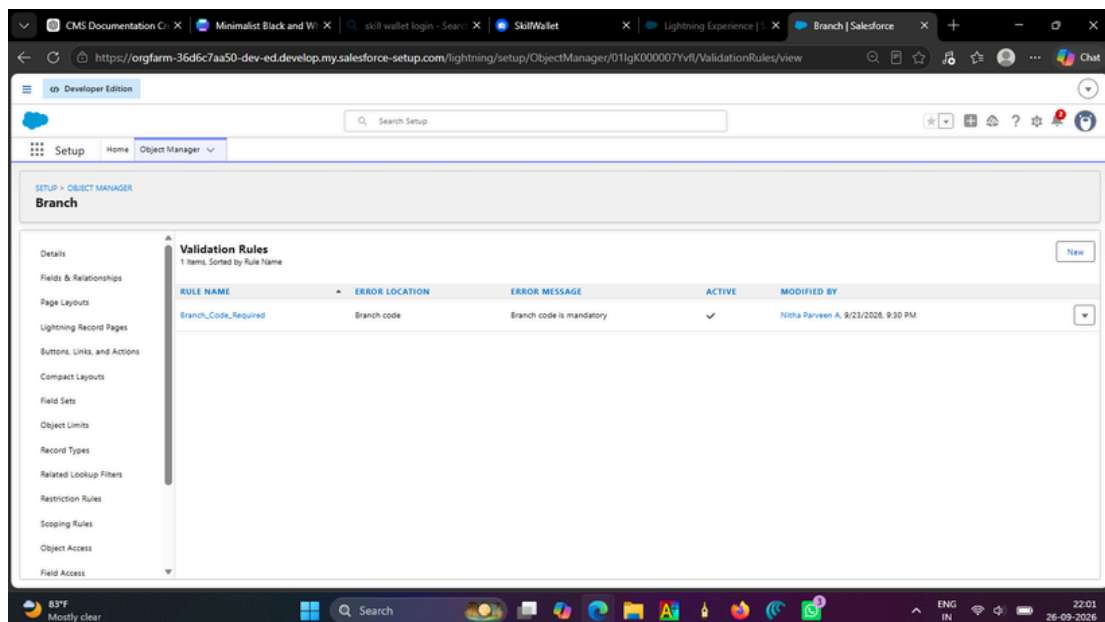

Activity 4 – Create Validation Rule for Branch

1. Validate Branch Code

1. Go to Setup → Object Manager → Branch__c.
2. Open Validation Rules.
3. Click New.
4. Enter Branch_Code_Required as the Rule Name.
5. Enter:
ISBLANK(Branch_Code__c)
7. Activate the rule.
8. Enter the error message: Branch Code is mandatory.
9. Select Branch Code as the error location.
10. Click Save.

OUTPUT

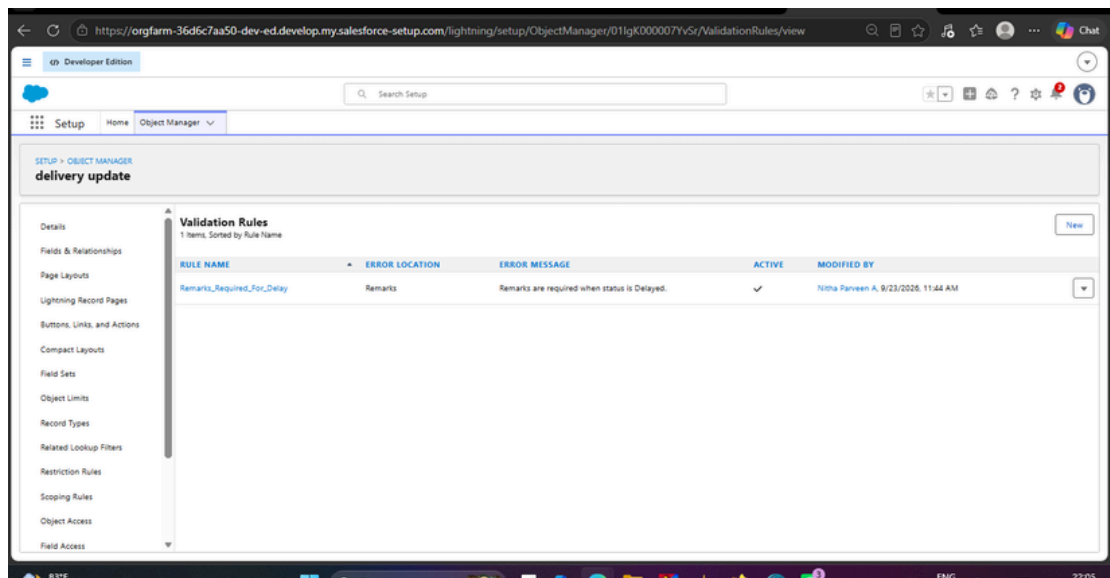

Activity 5 – Create Validation Rule for Delivery Update

1. Require Remarks for Delayed Shipments

1. Navigate to Setup → Object Manager → Delivery_Update__c.
2. Open Validation Rules.
3. Click New.
4. Enter Remarks_Required_For_Delay as the Rule Name.
5. Enter the following formula:
6. AND(
 7. ISPICKVAL(Status__c, "Delayed"),
 8. ISBLANK(Remarks__c)
- 9.)
10. Click Check Syntax.
11. Activate the validation rule.
12. Enter the error message: Remarks are required when status is Delayed.
13. Set the error location to the Remarks field.
14. Click Save.

OUTPUT

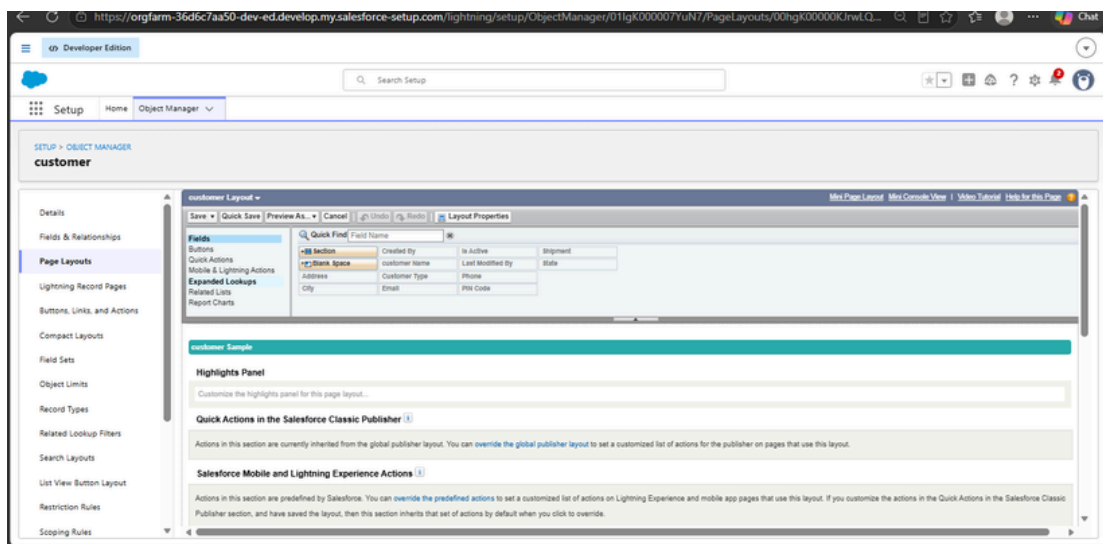

Milestone 6 – Page Layouts

Activity 1 – Configure Customer Page Layout

1. Open Setup in Salesforce.
2. Go to Object Manager.
3. Select Customer__c.
4. Open Page Layouts.
5. Select the default Customer Layout.
6. From the field palette, select Section.
7. Drag the section onto the page layout.
8. Enter Customer Information as the section name.
9. Select a 2-Column layout.
10. Add the following fields:
 - Customer Name
 - Customer Type
 - Email
 - Phone
 - Is Active
11. Create another section named Address Details.
12. Add:
 - Address
 - City
 - State
 - Pincode
13. Arrange the fields in a suitable order.
14. Click Save.

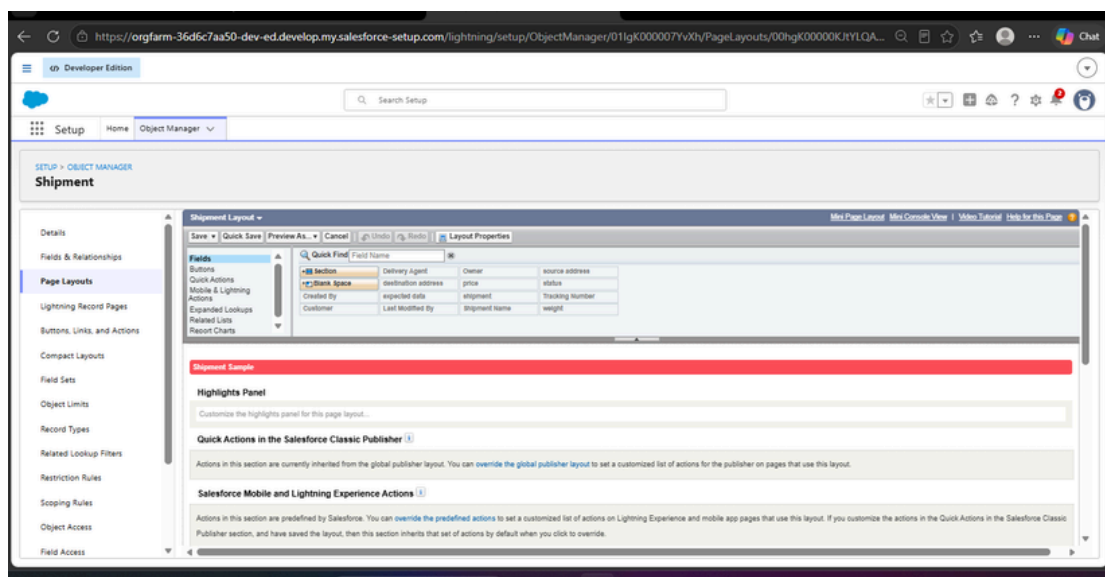

OUTPUT

Activity 2 – Configure Shipment Page Layout

1. Navigate to Setup → Object Manager → Shipment__c.
2. Select Page Layouts.
3. Open the default Shipment Layout.
4. Add a section named Shipment Details.
5. Place these fields inside the section:
 - Tracking Number
 - Customer
 - Shipment Type
 - Weight
 - Price
 - Status
6. Create a second section named Address Information.
7. Add:
 - Source Address
 - Destination Address
8. Create another section called Delivery Information.
9. Add:
 - Expected Date
 - Assigned Agent
10. Arrange the fields properly.
11. Click Save.

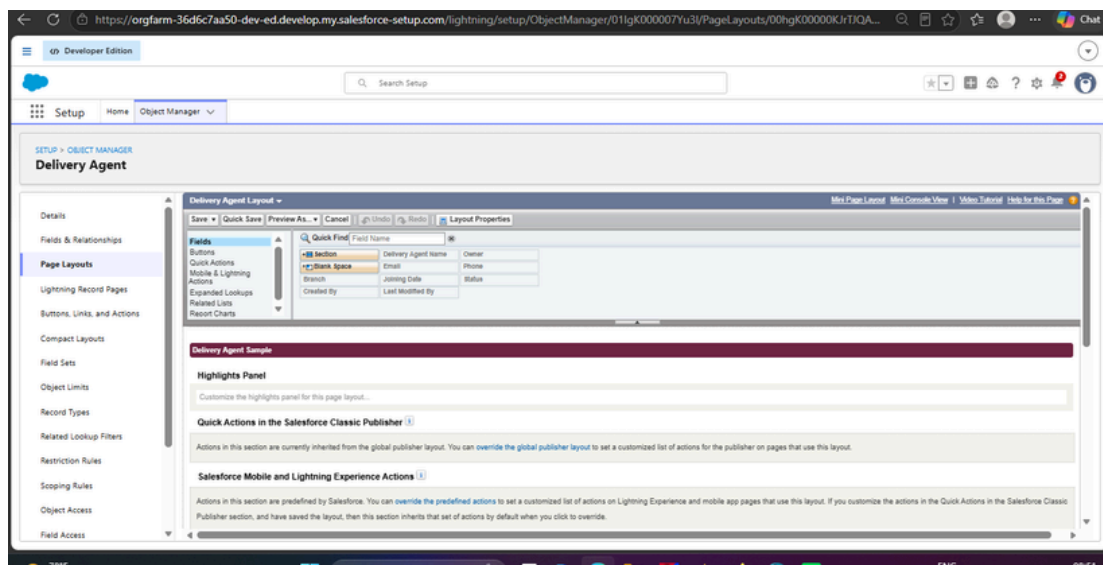

OUTPUT

Activity 3 – Configure Delivery Agent Page Layout

1. Open Setup → Object Manager → Delivery_Agent__c.
2. Select Page Layouts.
3. Open the default Delivery Agent layout.
4. Create or arrange the Agent Details section.
5. Add:
 - Agent Name
 - Email
 - Phone
 - Branch
 - Status
 - Joining Date
6. Arrange the fields according to their usage.
7. Add related information such as Related Shipments and Related Delivery Updates where required.
8. Click Save.

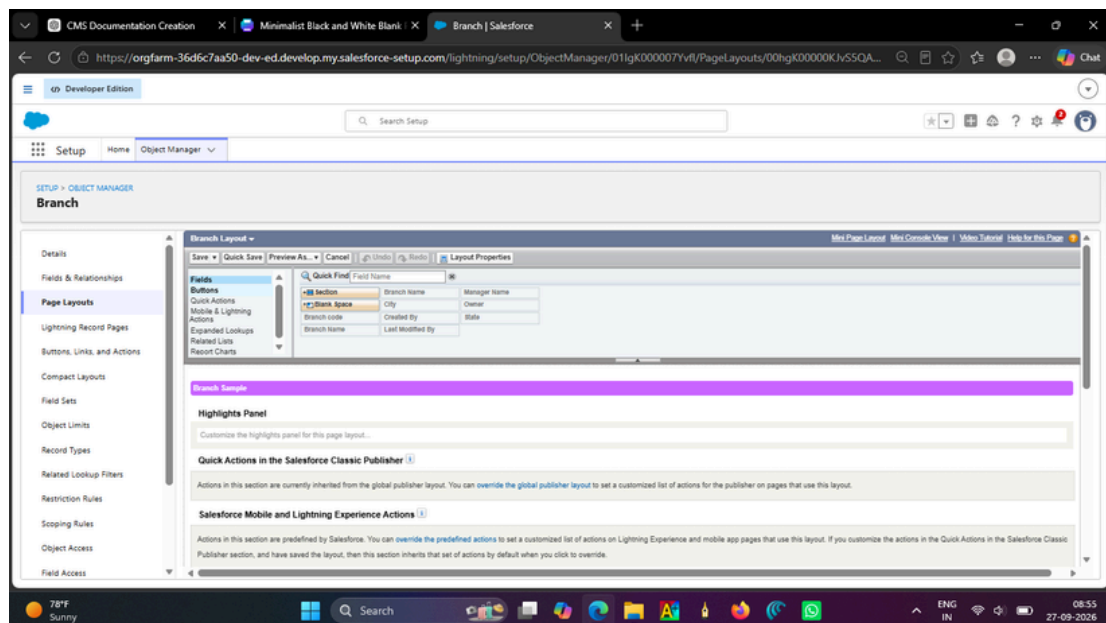

OUTPUT

Activity 4 – Configure Branch Page Layout

1. Go to Setup → Object Manager → Branch__c.
2. Open Page Layouts.
3. Select the default Branch layout.
4. Create a section named Branch Information.
5. Add:
 - Branch Name
 - Branch Code
 - City
 - State
 - Manager Name
6. Organize the fields clearly on the layout.
7. Click Save.

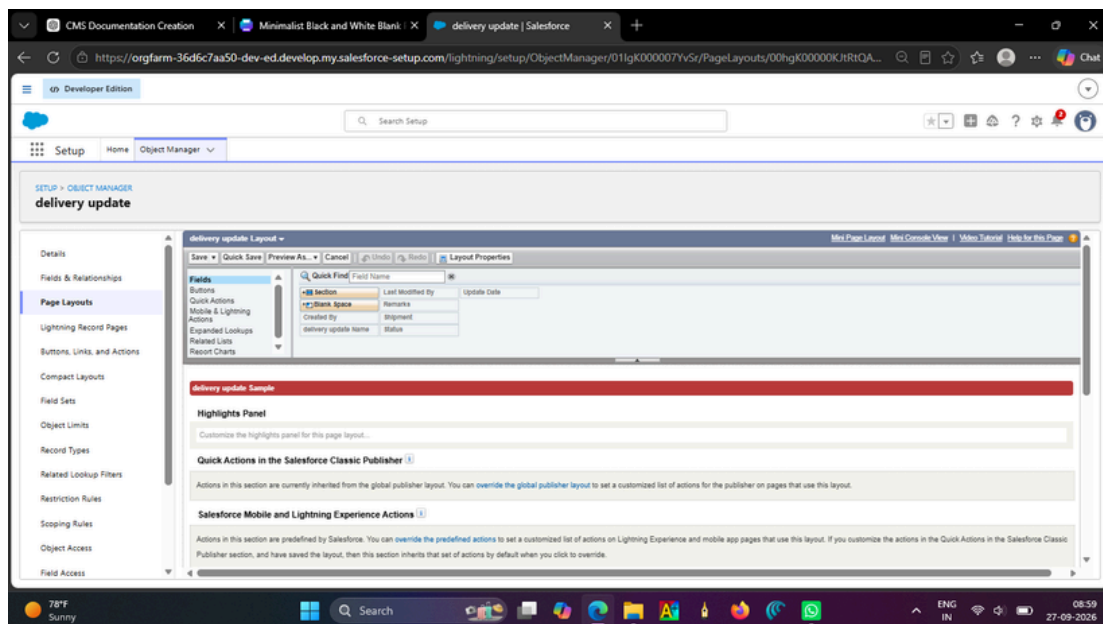

OUTPUT

Activity 5 – Configure Delivery Update Page Layout

1. Navigate to Setup → Object Manager → Delivery_Update__c.
2. Select Page Layouts.
3. Open the default Delivery Update layout.
4. Create a section called Update Information.
5. Add:
 - Update Number
 - Shipment
 - Status
 - Update Date
 - Remarks
6. Position the fields in a logical order.
7. Click Save.

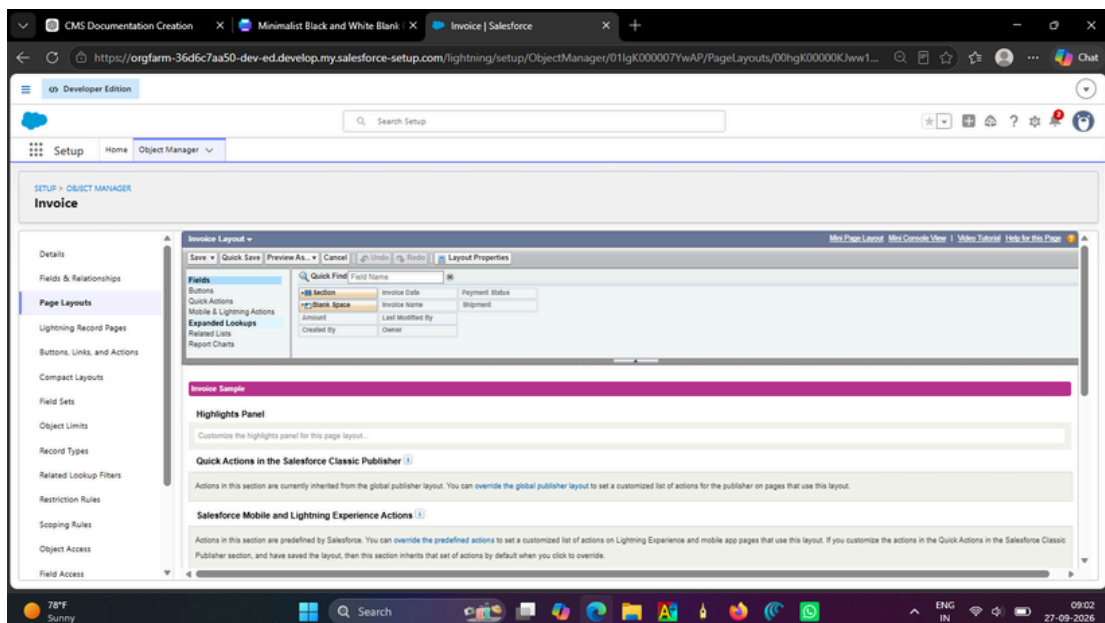

OUTPUT

Activity 6 – Configure Invoice Page Layout

1. Open Setup → Object Manager → Invoice__c.
2. Select Page Layouts.
3. Open the default Invoice layout.
4. Create a section named Invoice Details.
5. Add:
 - Invoice Number
 - Shipment
 - Amount
 - Invoice Date
 - Payment Status
6. Arrange the fields for easy viewing and entry.
7. Click Save.

OUTPUT

Milestone 7 – Flows

Activity 1: Automatically Update Shipment Status

Step 1: Create a Record-Triggered Flow

1. Open Setup.
2. Search for Flows in Quick Find.
3. Select Flows.
4. Click New Flow.
5. Select Record-Triggered Flow.
6. Click Create.
7. Select Delivery_Update__c as the object.
8. Choose A record is created as the trigger.
9. Set Condition Requirements to None.
10. Select Optimize the Flow for Actions and Related Records.
11. Click Done.

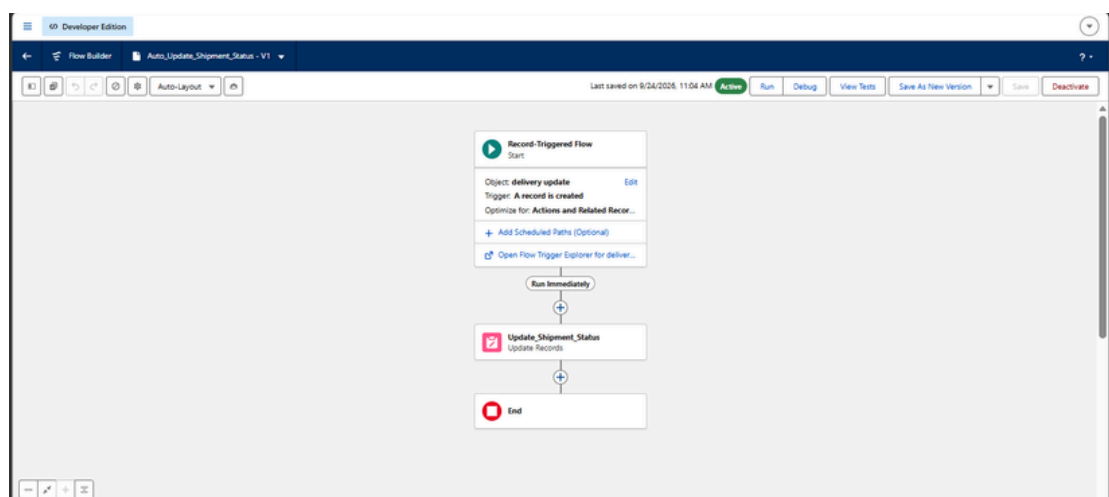

Step 2: Update the Related Shipment

1. Click the + icon below the Start element.
2. Select Update Records.
3. Enter the label Update_Shipment_Status.
4. Select the option to specify the conditions for records to update.
5. Choose Shipment__c as the object.
6. Select the Id field.
7. Set the operator to Equals.
8. Set the value to {!\$Record.Shipment__c}.
9. Set the field Status__c to {!\$Record.Status__c}.
10. Click Done.

Step 3: Save and Activate the Flow

1. Click Save.
2. Enter the Flow Label as Auto Update Shipment Status.
3. Click Save.
4. Click Activate.

OUTPUT

Milestone 8 – Lightning App

Activity 1: Create Courier Management Lightning App

Step 1: Open App Manager

1. Go to Setup.
2. Search for App Manager.
3. Open App Manager.
4. Click New Lightning App.

Step 2: Enter App Details

1. Enter Courier Management System as the App Name.
2. Upload a suitable app image or icon.
3. Click Next.

Step 3: Configure App Options

1. Keep the default App Options.
2. Click Next.

Step 4: Configure Utility Items

1. Keep the default Utility Items settings.
2. Click Next.

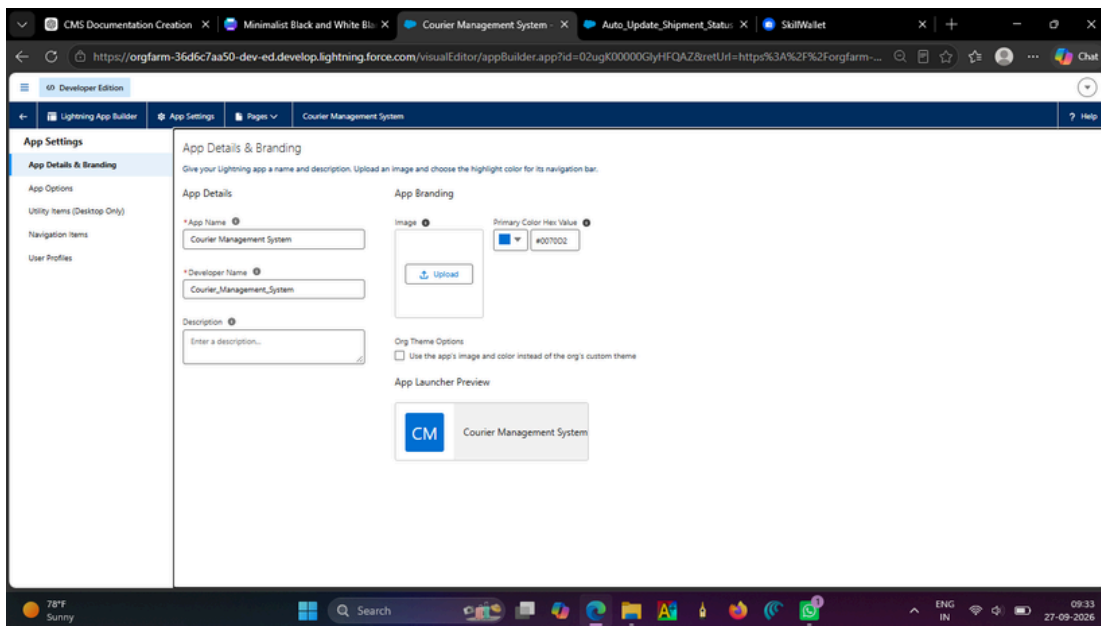

Step 5: Add Navigation Items

1. Find the following items under Available Items:
 - Customer
 - Shipment
 - Delivery Agent
 - Branch
 - Delivery Update
 - Invoice
 - Reports
 - Dashboards
2. Move all required items to Selected Items.
3. Click Next.

Step 6: Select User Profiles

1. Find System Administrator under Available Profiles.
2. Move it to Selected Profiles.
3. Click Save & Finish.

OUTPUT

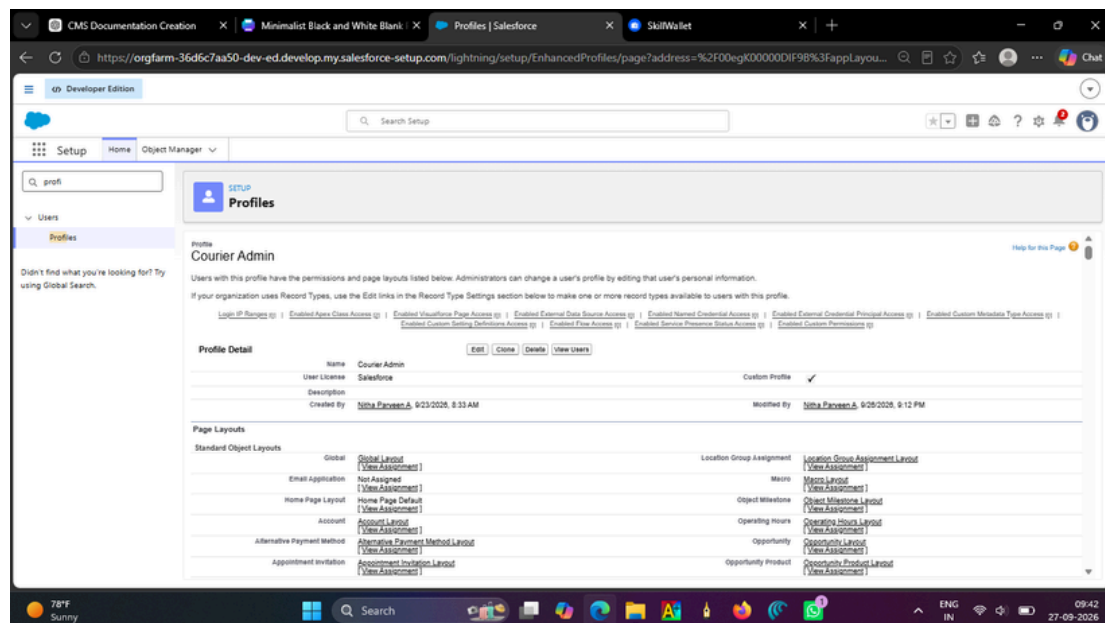

Milestone 9 – Profiles

Activity 1: Create Custom Profile – Courier Admin

1. Open Setup.
2. Enter Profiles in the Quick Find box.
3. Select Profiles.
4. Click New Profile.
5. Choose System Administrator as the Existing Profile.
6. Enter Courier Admin as the Profile Name.
7. Click Save.

OUTPUT

Activity 2: Create Custom Profile – Branch Manager

1. Go to Setup → Profiles.
2. Click New Profile.
3. Select Standard Platform User as the Existing Profile.
4. Enter Branch Manager as the Profile Name.
5. Click Save.
6. Open the Branch Manager profile.
7. Click Edit.

App and Tab Settings

1. Set Courier Management System as the default app.
2. Make the following tabs visible:
 - Customers
 - Shipments
 - Delivery Agents
 - Branches
 - Delivery Updates
 - Invoices
 - Reports
 - Dashboards

Session and Password Settings

- Open Session Settings.
- Set Session Timeout to 2 Hours of Inactivity.
- Open Password Policies.
- Set password expiration to Never Expires.
- Set Minimum Password Length to 8.
- Click Save.

OUTPUT

The screenshot shows the Salesforce Setup interface for the 'Branch Manager' profile. The browser address bar displays the URL: `https://orgfarm-36d6c7aa50-dev-ed.develop.my.salesforce-setup.com/lightning/setup/EnhancedProfiles/page?address=%2F00egK00000DKBkb`. The page title is 'Profiles' under the 'SETUP' menu. The profile name is 'Branch Manager'. Below the profile name, there is a description: 'Users with this profile have the permissions and page layouts listed below. Administrators can change a user's profile by editing that user's personal information. If your organization uses Record Types, use the Edit links in the Record Type Settings section below to make one or more record types available to users with this profile.' The 'Page Layouts' section is expanded, showing a table of assignments for various objects and layouts. The table has two columns: 'Standard Object Layouts' and 'Location Group Assignment'. The rows include: Global (Global Layout), Email Application (Not Assigned), Home Page Layout (Home Page Default), Account (Account Layout), Alternative Payment Method (Alternative Payment Method Layout), Appointment Invitation (Appointment Invitation Layout), Location Group Assignment (Location Group Assignment Layout), Macro (Macro Layout), Object Milestone (Object Milestone Layout), Operating Hours (Operating Hours Layout), Opportunity (Opportunity Layout), and Opportunity Product (Opportunity Product Layout). Each layout link is followed by a 'View Assignment' link. The bottom of the screen shows the Windows taskbar with the search bar and various application icons.

Page Layouts	
Standard Object Layouts	Location Group Assignment
Global	Global Layout View Assignment
Email Application	Not Assigned View Assignment
Home Page Layout	Home Page Default View Assignment
Account	Account Layout View Assignment
Alternative Payment Method	Alternative Payment Method Layout View Assignment
Appointment Invitation	Appointment Invitation Layout View Assignment
	Location Group Assignment Layout View Assignment
	Macro Layout View Assignment
	Object Milestone Layout View Assignment
	Operating Hours Layout View Assignment
	Opportunity Layout View Assignment
	Opportunity Product Layout View Assignment

Activity 3: Create Custom Profile – Delivery Agent

1. Open Setup → Profiles.
2. Click New Profile.
3. Select Standard Platform User as the Existing Profile.
4. Enter Delivery Agent as the Profile Name.
5. Click Save.

App and Tab Access

- Set Courier Management System as the default app.
- Make these tabs visible:
- Shipments
- Delivery Updates

Restrictions

1. Remove permission to edit Branch records.
2. Do not provide delete permissions.
3. Keep reporting access limited.
4. Click Save.

Activity 4: Create Custom Profile – Customer Support

1. Go to Setup → Profiles.
2. Click New Profile.
3. Select Standard User as the Base Profile.
4. Enter Customer Support as the Profile Name.
5. Click Save.
6. Access Configuration

Make these tabs visible:

- Customers
- Shipments
- Delivery Updates

Session Settings

1. Set Session Timeout to 2 Hours.
2. Set the Minimum Password Length to 8.
3. Click Save.

OUTPUT

The screenshot displays the Salesforce Setup interface for a custom profile. The browser window shows the URL: `https://orgfarm-36d6c7aa50-dev-ed.develop.my.salesforce-setup.com/lightning/setup/EnhancedProfiles/page?address=%2F00egK00000D5MVh`. The page title is "Profiles | Salesforce". The left sidebar shows the "Setup" menu with "Profiles" selected. The main content area is titled "Custom: Support Profile" and includes a "Profile Detail" section with fields for Name, User License, Description, Created By, and Modified By. Below this is a "Page Layouts" section with a table of assignments.

Profile Detail

Field	Value
Name	Custom: Support Profile
User License	Salesforce
Description	
Created By	OneFarm EPC
Modified By	Nitha Pavan S

Page Layouts

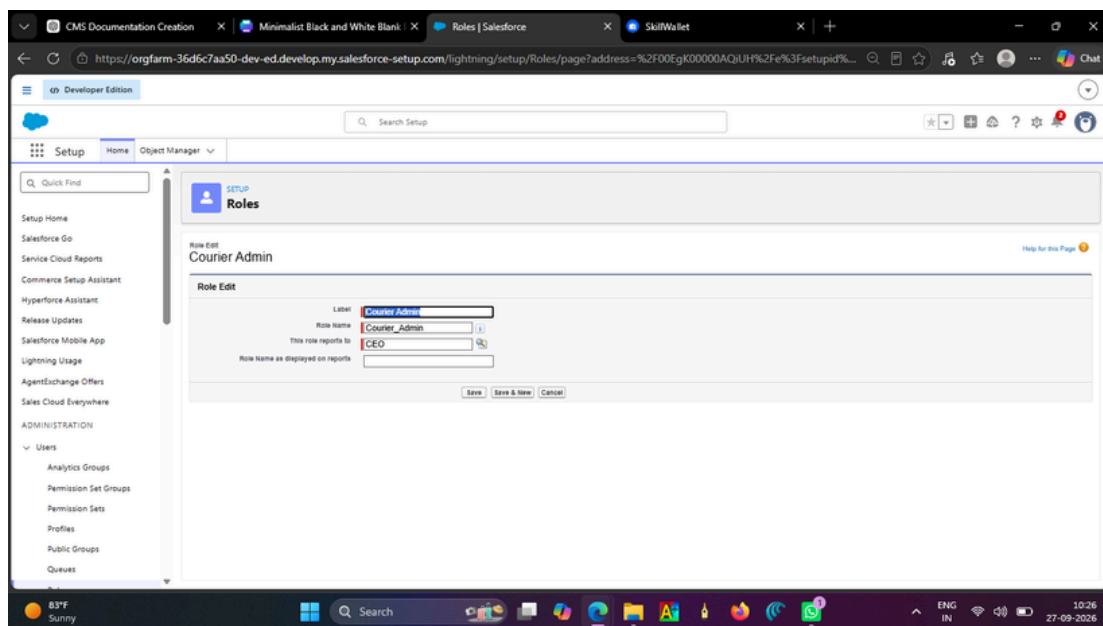

Standard Object Layouts	Global	Location Group Assignment	Location Group Assignment Layout
Email Application	Not Assigned	Macro	Macro Layout
Home Page Default	Home Page Default	Object Milestone	Object Milestone Layout
Account	Account: Standard Layout	Operating Hours	Operating Hours Layout
Alternative Payment Method	Alternative Payment Method Layout	Opportunity	Opportunity: Support Layout
Appointment Invitation	Appointment Invitation Layout	Opportunity Product	Opportunity Product Layout

Milestone 10 – Roles

Activity 1: Create Courier Admin Role

1. Open Setup.
2. Search for Roles in the Quick Find box.
3. Select Roles.
4. Click Set Up Roles.
5. Click Expand All.
6. Locate the CEO role.
7. Click Add Role under CEO.
8. Enter Courier Admin as the Role Label.
9. Confirm the Role Name is generated automatically.
10. Click Save.

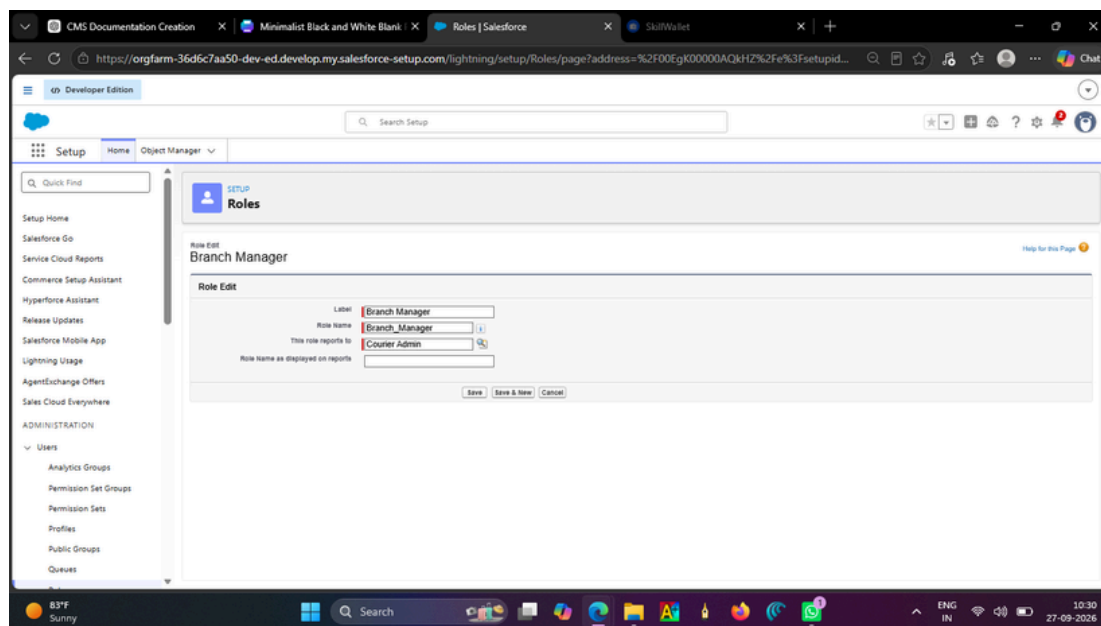

OUTPUT

Activity 2: Create Branch Manager Role

1. Locate the Courier Admin role.
2. Click Add Role below Courier Admin.
3. Enter Branch Manager as the Role Label.
4. Verify the automatically generated Role Name.
5. Click Save.

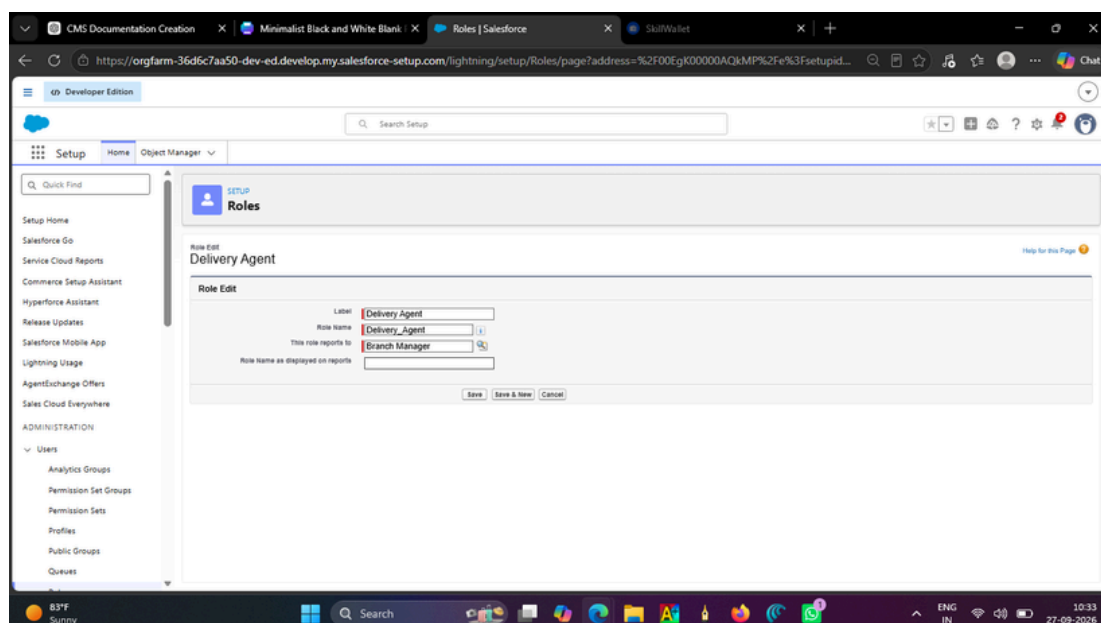

OUTPUT

Activity 3: Create Delivery Agent Role

1. Locate the Branch Manager role.
2. Click Add Role below Branch Manager.
3. Enter Delivery Agent as the Role Label.
4. Verify the Role Name.
5. Click Save.

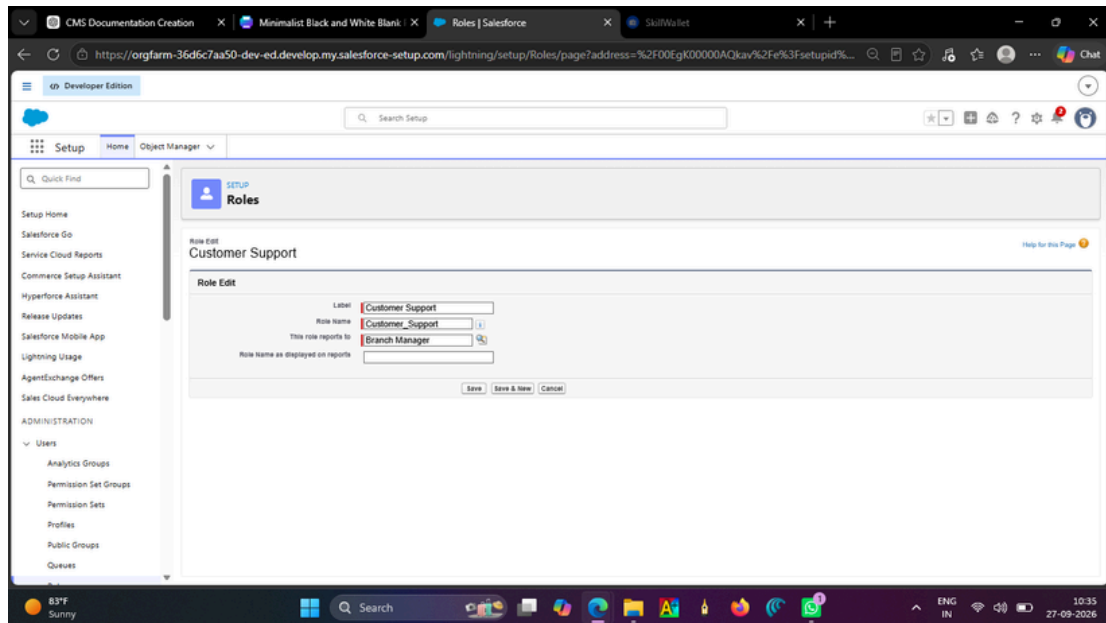

OUTPUT

Activity 4: Create Customer Support Role

1. Locate the Branch Manager role.
2. Click Add Role below Branch Manager.
3. Enter Customer Support as the Role Label.
4. Verify the automatically generated Role Name.
5. Click Save.

OUTPUT

Role Hierarchy

- Set Courier Admin as the top-level project role.
- Place Branch Manager below Courier Admin.
- Place Delivery Agent below Branch Manager.
- Place Customer Support below Branch Manager.
- Verify the complete hierarchy in the Roles section.

Milestone 11 – Users

Activity 1: Create a Courier Admin User

1. Open Setup.
2. Enter Users in the Quick Find box.
3. Select Users.
4. Click New User.
5. Enter the required user details.
6. Check all entered details.
7. Click Save.

Activity 2: Create Additional Users

1. Go to Setup → Users.
2. Click New User.
3. Enter the required personal information.
4. Assign the appropriate Role.
5. Select the required User License.
6. Assign the matching Profile.
7. Click Save.

Branch Manager User

- Set Role as Branch Manager.
- Set User License as Salesforce.
- Set Profile as Branch Manager.
- Save the user.

Delivery Agent User

- Set Role as Delivery Agent.
- Set User License as Salesforce Platform.
- Set Profile as Delivery Agent.
- Save the user.

Customer Support User

- Set Role as Customer Support.
- Set User License as Salesforce Platform.
- Set Profile as Customer Support.
- Save the user.

Activity 3: Verify User Configuration

1. Open the Users page.
2. Check that each username is unique.
3. Verify that every user has a valid email address.
4. Confirm that the correct role is assigned.
5. Confirm that the correct profile is assigned.
6. Verify the selected user license.
7. Check that the required users are active.

Milestone 12 – Reports & Dashboards

Activity 1: Create Custom Report Types

Step 1: Open Report Types

1. Open Setup using the Gear icon.
2. Search for Report Types in Quick Find.
3. Select Report Types.
4. Click New Custom Report Type.

Step 2: Create Shipment Report Type

1. Select Shipment__c as the Primary Object.
2. Enter Shipment Tracking Report as the Label.
3. Select Reports as the Category.
4. Set Deployment Status to Deployed.
5. Click Next.
6. Click Save.

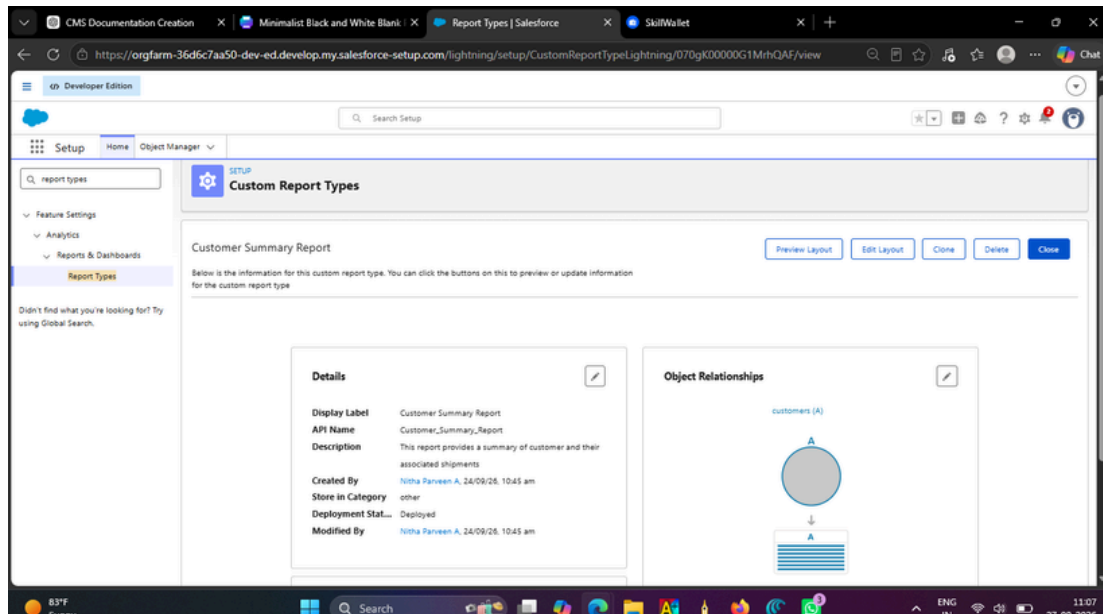

Step 3: Create Customer Report Type

1. Click New Custom Report Type.
2. Select Customer__c as the Primary Object.
3. Enter Customer Summary Report as the Label.
4. Select Reports as the Category.
5. Set Deployment Status to Deployed.
6. Click Next.
7. Click Save.

Step 4: Create Agent Performance Report Type

1. Click New Custom Report Type.
2. Select Delivery_Agent__c as the Primary Object.
3. Enter Agent Performance Report as the Label.
4. Select Reports as the Category.
5. Set Deployment Status to Deployed.
6. Click Next.
7. Click Save.

OUTPUT

Activity 2: Create Reports

Report 1: Shipment Status Summary

Step 1: Create Report

1. Open the App Launcher.
2. Search for Reports.
3. Open Reports.
4. Click New Report.
5. Select Shipment Tracking Report.
6. Click Continue.

Step 2: Add Columns

1. Add Tracking Number.
2. Add Customer.
3. Add Status.
4. Add Expected Date.
5. Add Assigned Agent.

Step 3: Apply Filters

1. Set Show Me to All Shipments.
2. Set the Date Filter to This Month.
3. Add a Status filter if required.

Step 4: Group and Summarize

1. Group the report rows by Status__c.
2. Add a summary calculation for Price.

Step 5: Save the Report

1. Click Save & Run.
2. Enter Shipment Status Summary as the report name.
3. Select CMS Reports as the folder.
4. Save the report.

Report 2: Agent Performance Report

Step 1: Create Report

1. Click New Report.
2. Select Agent Performance Report.
3. Click Continue.

Step 2: Add Fields

1. Add Agent Name.
2. Add Branch.
3. Add Number of Shipments.
4. Add Status.

Step 3: Group Records

1. Select Delivery_Agent__c for grouping.
2. Apply the grouping to the report.

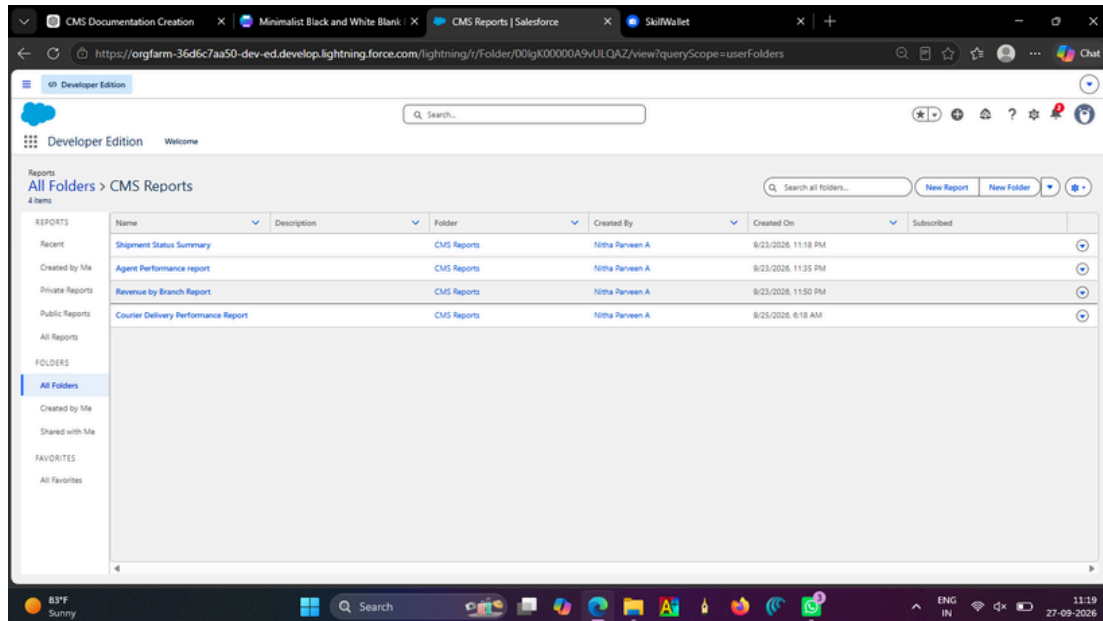

Step 4: Save Report

1. Click Save & Run.
2. Enter Agent Performance Report as the report name.
3. Select CMS Reports as the folder.
4. Save the report.

Report 3: Revenue by Branch Report

1. Create a new report using Shipment Tracking Report.
2. Add Tracking Number.
3. Add Customer.
4. Add Price.
5. Add the available invoice/payment status field.
6. Group the records by Branch.
7. Add Month as the time grouping.
8. Save the report as Revenue by Branch Report

OUTPUT

Activity 3: Create Dashboard

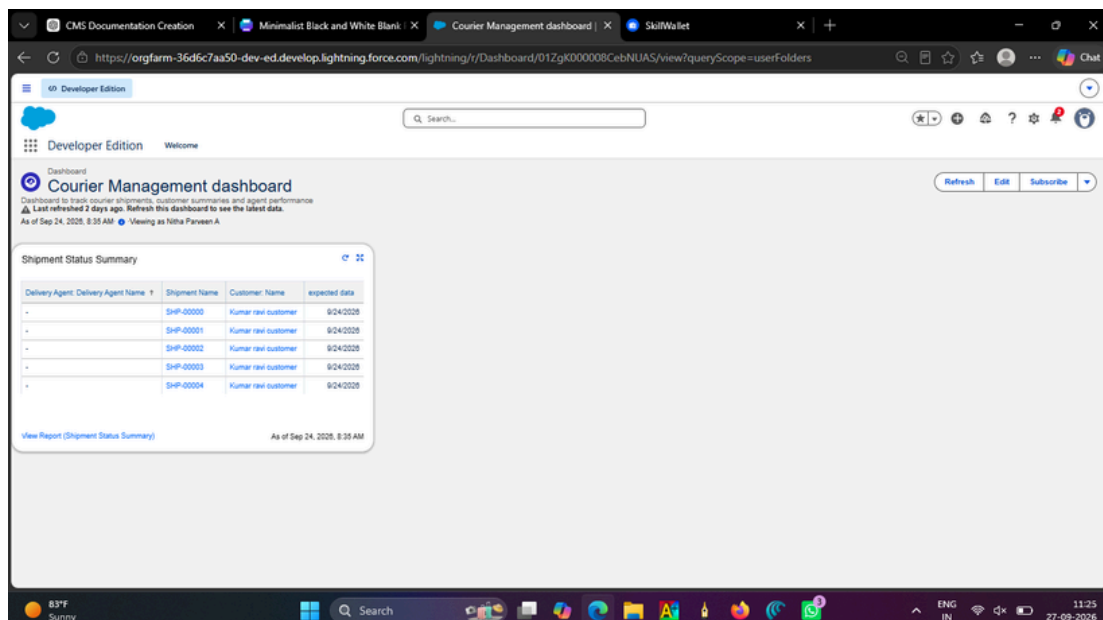

Step 1: Open Dashboards

1. Open the App Launcher.
2. Search for Dashboards.
3. Select Dashboards.
4. Click New Dashboard.

Step 2: Enter Dashboard Details

1. Enter Courier Management Dashboard as the dashboard name.
2. Select CMS Reports as the folder.
3. Click Create.

OUTPUT

Activity 4: Add Dashboard Components

Component 1: Shipment Status Overview

1. Click + Component.
2. Select Shipment Status Summary.
3. Choose Donut Chart as the visualization.
4. Click Add.

Component 2: Agent Performance

1. Click + Component.
2. Select Agent Performance Report.
3. Choose Bar Chart.
4. Click Add.

Component 3: Revenue by Branch

1. Click + Component.
2. Select Revenue by Branch Report.
3. Choose Column Chart.
4. Click Add.

Activity 5: Save Dashboard

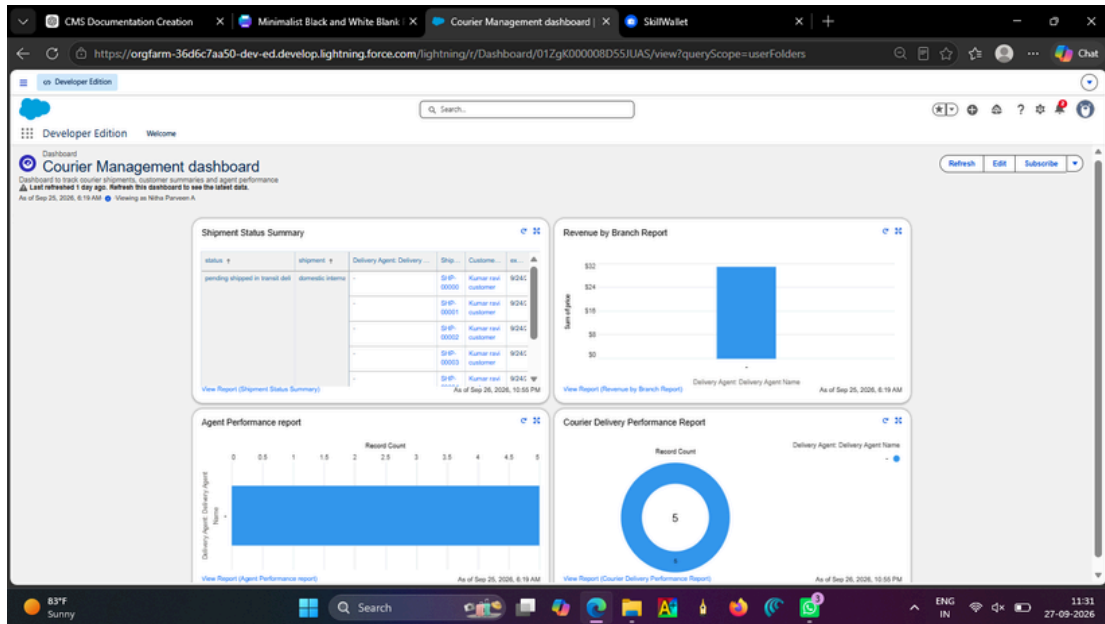

1. Arrange the dashboard components as required.
2. Click Save.
3. Click Done.
4. Open the dashboard and verify all components.
5. **Share the dashboard with:**

Courier Admin

Branch Managers

Customer Support Team

OUTPUT

ADVANTAGES & DISADVANTAGES

Advantages

- Centralizes customer and shipment information.
- Reduces manual data entry and repetitive work.
- Automates shipment status updates.
- Provides organized access based on user roles and profiles.
- Supports real-time reports and dashboards.
- Improves tracking of courier operations.
- Helps maintain consistent and accurate records.

Disadvantages

- The system depends on the Salesforce platform.
- Initial Salesforce configuration requires time and effort.
- Some advanced features may require additional Salesforce services.
- Users need basic Salesforce knowledge to manage the system.
- Internet connectivity is required to access the cloud-based system.

CONCLUSION

- The Courier Management System provides a centralized platform for managing courier operations.
- Salesforce objects are used to organize customer, shipment, branch, agent, delivery update, and invoice information.
- Validation rules help maintain accurate and consistent data.
- Flows automate shipment status changes and reduce manual work.
- Profiles and roles provide controlled access to system data and functions.
- Reports and dashboards help monitor courier activities and business information.
- The system supports organized shipment tracking and improves operational efficiency.
- Overall, the project demonstrates how Salesforce can be configured to manage courier operations through automation, security, and reporting.

Project Completion

1. The Courier Management System project has been successfully completed.
2. Salesforce configuration and automation features were implemented.
3. The system was tested using sample courier records.
4. Reports and dashboards were created to monitor courier operations.
5. The project is ready for demonstration and presentation.
