| Team ID       | SWTID-2026-5359                            |
| Project Name  | Courier Management System Using Salesforce |
| Maximum Marks | 3 Marks                                    |

### Define Problem Statements

Create problem statements from the customer's point of view. The statements identify the main challenges faced by the courier business owner, delivery agent, and customer.

|      | Problem Statement<br>(Customer) | I am<br>(Customer)<br>I'm                                                      | I'm trying to<br>But                                | Because<br>Because                                                 | Because<br>Which makes me feel                   |
|------|---------------------------------|--------------------------------------------------------------------------------|-----------------------------------------------------|--------------------------------------------------------------------|--------------------------------------------------|
| PS-1 | A courier business owner        | To manage and track shipment weight, status and delivery details in one system | Manual tracking leads to errors and delays          | No centralized Salesforce system with custom fields such as Weight | Frustrated and worried about customer complaints |
| PS-2 | A delivery agent                | To update shipment details quickly and accurately                              | The current process is slow and not mobile-friendly | Weight and other fields must be entered manually on paper          | Tired and inefficient                            |
| PS-3 | A customer who sent a courier   | To track my courier status and delivery time in real time                      | No real-time updates are available                  | Lack of a transparent tracking system                              | Anxious and dissatisfied                         |
