

SOLUTION REQUIREMENTS

Date	29-09-2026
Team ID	SWTID-2026-5359
Project Name	Courier Management System Using Salesforce
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements

Define the functional and non-functional requirements for the proposed solution from a system and stakeholder perspective. **The requirements outline the core features the courier management system must perform**, along with the quality and compliance expectations to ensure scalability, security, and usability.

Step 1: Functional Requirements

S.No	Requirement Category	Requirement Description	Priority
1	Authentication	Secure Salesforce login for admin, delivery agent and customers using username/password and OTP	High
2	Authorization levels	Admin full access; Delivery Agent update shipment status; Customer view tracking only	High
3	External interfaces	Integrate Google Maps API for tracking; SMS/Email gateway for notifications	High
4	Transactions processing	Handle shipment creation, weight field calculation, status updates and payment processing in real-time	High
5	Reporting	Dashboard for daily shipments, delivery performance, weight-wise reports and export to Excel. Destination	Medium
6	Business rules		High
7	Compliance	Adhere to data privacy and secure storage of customer address and contact details Weight,	Medium
8	Other	Push notifications for status change and feedback collection	Low

SOLUTION REQUIREMENTS

Step 2: Non-Functional Requirements

Define the non-functional requirements for the proposed solution to ensure performance, scalability, security, reliability, usability, and maintainability. These criteria outline the expected quality standards and operational constraints for the courier management system.

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	System should process shipment creation and tracking queries quickly	Page loads in <2 seconds, search results in <3 seconds
2	Scalability	Support growing number of shipments and users during peak seasons	Supports up to 10,000 shipments and 1000 concurrent users
3	Security & Data Privacy	Implement Salesforce Shield encryption, role-based access, secure storage of customer data	End-to-end encryption and 2-factor authentication
4	Reliability & Availability	System should be available for booking and tracking 24/7 with minimal downtime	99.9% uptime per month, automatic backup daily
5	Usability & Accessibility	Simple intuitive UI for all roles including mobile-friendly for delivery agents	Complies with WCAG 2.1, mobile responsive
6	Other	Maintainability and portability	Easy to update custom fields like Weight, easy integration with other Salesforce modules
