Project Title	Courier Management System Using Salesforce
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to transform courier operations using Salesforce platform, boosting efficiency and accuracy. It tackles logistics inefficiencies, promising better shipment management, real-time tracking, reduced delivery delays, and happier customers. Key features include automated agent assignment, weight-based pricing, real-time tracking, and Salesforce-based dashboards.

Project Overview	
Objective	The primary objective is to revolutionize courier operations by implementing a Salesforce-based solution, ensuring faster and more accurate shipment booking, tracking, and delivery management.
Scope	The project comprehensively assesses and enhances the courier management process, incorporating Salesforce platform for a more robust and efficient logistics system covering booking, tracking, assignment, and delivery.
Problem Statement	
Description	Addressing inaccuracies and inefficiencies in the current manual courier management system adversely affects operational efficiency, delivery timelines, and customer satisfaction.
Impact	Solving these issues will result in improved operational efficiency, reduced delivery delays, and an overall enhancement in the logistics process, contributing to customer satisfaction and organizational success.
Proposed Solution	
Approach	Employing Salesforce platform with Apex, Flows, and custom objects to automate the entire shipment lifecycle, creating a dynamic and adaptable courier management system.
Key Features	- Implementation of Salesforce-based shipment management model.

	- Real-time tracking for shipment visibility and customer notifications. - Automated agent assignment and route optimization for faster delivery. - Continuous improvement via Salesforce reports and dashboards for logistics analytics.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Salesforce Cloud (No local GPU required)
Memory	RAM specifications	8 GB (for development system)
Storage	Disk space for data, models, and logs	1 TB SSD + Salesforce Cloud Storage
Software		
Frameworks	Salesforce framework	Salesforce Lightning Platform, Apex
Libraries	Additional libraries / APIs	Lightning Web Components (LWC), Salesforce Flow, Process Process Builder, Google Maps API, Twilio, Razorpay
Development Environment	IDE	VS Code with Salesforce Extension Pack, Developer Console, Salesforce Setup
Data		
Data	Source, size, format	Custom Objects: Shipment__c (10k+ records), Customer__c, Delivery_Agent__c, CSV import, Salesforce Objects
