

Performance Testing

Date	29-09-2026
Team ID	SWTID-2026-5359
Project Name	Courier Management system (CMS)
Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Salesforce Developer Org / Salesforce Lightning Application
Type of Testing	System Testing
Target Module / API	Customer, Shipment, Delivery Agent, Branch, Delivery Update and Invoice
Test Environment	Salesforce Cloud / Developer Org
Test Date	15 March 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Create and manage customer and shipment records	—	—	Records should be created and stored correctly
2	Update shipment status and delivery information	—	—	Shipment status should update correctly
3	Generate shipment, agent and invoice reports	—	—	Reports should display accurate courier information
4	Access and view courier dashboard	—	—	Dashboard should display shipment and operational information correctly

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	–	–	Not measured in project document
2	Response Time (Max)	< 5 seconds	–	–	Not measured in project document
3	Throughput (Req/sec)	–	–	–	Not provided
4	Error Rate	< 1%	–	–	Not measured in project document
5	CPU Utilization	< 80%	–	–	Not measured in project document
6	Memory Utilization	< 80%	–	–	Not measured in project document

Step 4: Observations & Analysis

Key Findings:

The Courier Management System was tested using sample courier records. The system supports customer and shipment management, delivery-agent association, shipment progress updates, invoice management, reports and dashboards.

Bottlenecks Identified:

No specific performance bottlenecks were documented

Optimization Steps Taken:

Salesforce validation rules, Flows, reports and dashboards were configured to improve data accuracy, automate processes and support operational monitoring.

Step 5: Screenshots / Evidence

Attach screenshots of your performance testing tool results below (e.g., JMeter report, Locust graphs, k6 output):
